# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">eprosima</a>	7
<a href="#">eprosima::fastcdr</a>	7
<a href="#">eprosima::fastcdr::exception</a>	7

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

_FastBuffer_iterator . . . . .	9
Cdr . . . . .	16
exception	
Exception . . . . .	148
BadParamException . . . . .	14
NotEnoughMemoryException . . . . .	222
FastBuffer . . . . .	150
FastCdr . . . . .	155
FastCdr::state . . . . .	225
Cdr::state . . . . .	226

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">_FastBuffer_iterator</a>	This class implements the iterator used to go through a <a href="#">FastBuffer</a> . . . . .	9
<a href="#">BadParamException</a>	This class is thrown as an exception when a invalid parameter was being serialized . . . . .	14
<a href="#">Cdr</a>	This class offers an interface to serialize/deserialize some basic types using CDR protocol inside an <a href="#">eprosima::fastcdr::FastBuffer</a> . . . . .	16
<a href="#">Exception</a>	This abstract class is used to create exceptions . . . . .	148
<a href="#">FastBuffer</a>	This class represents a stream of bytes that contains (or will contain) serialized data . . . . .	150
<a href="#">FastCdr</a>	This class offers an interface to serialize/deserialize some basic types using a modified CDR protocol inside a <a href="#">eprosima::FastBuffer</a> . . . . .	155
<a href="#">NotEnoughMemoryException</a>	This class is thrown as an exception when the buffer's internal memory reaches its size limit . . .	222
<a href="#">FastCdr::state</a>	This class stores the current state of a CDR serialization . . . . .	225
<a href="#">Cdr::state</a>	This class stores the current state of a CDR serialization . . . . .	226

- void `rmemcpy` (void \*dst, const size\_t size)  
*This function copies from the raw buffer to a external buffer.*
- void `operator+=` (size\_t numBytes)  
*This function increments the position where the iterator points.*
- size\_t `operator-` (const `_FastBuffer_iterator` &it) const  
*This operator returns the subtraction of the current iterator's position and the source iterator's position.*
- `_FastBuffer_iterator operator++` ()  
*This function increments the iterator in one the position.*
- `_FastBuffer_iterator operator++` (int)  
*This function increments the iterator in one the position.*
- char \* `operator&` ()  
*This function returns the current position in the raw buffer.*

### 5.1.1 Detailed Description

This class implements the iterator used to go through a [FastBuffer](#).

### 5.1.2 Constructor & Destructor Documentation

#### 5.1.2.1 `_FastBuffer_iterator()` [1/2]

```
_FastBuffer_iterator ( ) [inline]
```

Default constructor.

The iterator points any position.

#### 5.1.2.2 `_FastBuffer_iterator()` [2/2]

```
_FastBuffer_iterator (
    char * buffer,
    size_t index ) [inline], [explicit]
```

Constructor.

The iterator points to the indicated position.

##### Parameters

<i>buffer</i>	Pointer to the raw buffer.
<i>index</i>	Position of the raw buffer where the iterator will point.

### 5.1.3 Member Function Documentation

#### 5.1.3.1 `memcpy()`

```
void memcpy (
    const void * src,
    const size_t size ) [inline]
```

This function copies a buffer into the raw buffer.

##### Parameters

<i>src</i>	The source buffer.
<i>size</i>	The number of bytes to be copied.

### 5.1.3.2 `operator&()`

```
char* operator& ( ) [inline]
```

This function returns the current position in the raw buffer.

#### Returns

The current position in the raw buffer.

### 5.1.3.3 `operator++()` [1/2]

```
_FastBuffer_iterator operator++ ( ) [inline]
```

This function increments the iterator in one the position.

#### Returns

The current iterator.

### 5.1.3.4 `operator++()` [2/2]

```
_FastBuffer_iterator operator++ (
    int ) [inline]
```

This function increments the iterator in one the position.

#### Returns

The current iterator.

### 5.1.3.5 `operator+=()`

```
void operator+= (
    size_t numBytes ) [inline]
```

This function increments the position where the iterator points.

## Parameters

<i>numBytes</i>	Number of bytes the iterator moves the position.
-----------------	--

**5.1.3.6 operator-()**

```
size_t operator- (
    const _FastBuffer_iterator & it ) const [inline]
```

This operator returns the subtraction of the current iterator's position and the source iterator's position.

## Parameters

<i>it</i>	Source iterator whose position is subtracted to the current iterator's position.
-----------	--

## Returns

The result of subtract the current iterator's position and the source iterator's position.

**5.1.3.7 operator<<() [1/2]**

```
void operator<< (
    const _FastBuffer_iterator & iterator ) [inline]
```

This operator changes the iterator's raw buffer.

This operator makes the iterator point to the same position but in another raw buffer. The new raw buffer is the same than the source iterator's.

## Parameters

<i>iterator</i>	The source iterator. The iterator will use the source iterator's raw buffer after this operation.
-----------------	---

**5.1.3.8 operator<<() [2/2]**

```
void operator<< (
    const _T & data ) [inline]
```

This operator copies a data in the raw buffer.

The copy uses the size of the data type.

## Parameters

<i>data</i>	Data to be copied. Cannot be NULL.
-------------	------------------------------------

**5.1.3.9 `operator>>()` [1/2]**

```
void operator>> (
    _T & data ) [inline]
```

This operator copies data from the raw buffer to a variable.

The copy uses the size of the data type.

## Parameters

<i>data</i>	Data to be filled.
-------------	--------------------

**5.1.3.10 `operator>>()` [2/2]**

```
void operator>> (
    const _FastBuffer_iterator & iterator ) [inline]
```

This operator changes the position where the iterator points.

This operator takes the index of the source iterator, but the iterator continues using its raw buffer.

## Parameters

<i>iterator</i>	The source iterator. The iterator will use the source's iterator index to point to its own raw buffer.
-----------------	--

**5.1.3.11 `rmemcpy()`**

```
void rmemcpy (
    void * dst,
    const size_t size ) [inline]
```

This function copies from the raw buffer to a external buffer.

## Parameters

<i>dst</i>	The destination buffer.
<i>size</i>	The size of bytes to be copied.

The documentation for this class was generated from the following file:

- include/fastcdr/FastBuffer.h

## 5.2 BadParamException Class Reference

This class is thrown as an exception when a invalid parameter was being serialized.

```
#include <BadParamException.h>
```

Inheritance diagram for BadParamException:

### Public Member Functions

- Cdr\_DllAPI [BadParamException](#) (const char \*const &message) noexcept  
*Default constructor.*
- Cdr\_DllAPI [BadParamException](#) (const [BadParamException](#) &ex) noexcept  
*Default copy constructor.*
- Cdr\_DllAPI [BadParamException](#) & operator= (const [BadParamException](#) &ex) noexcept  
*Assignment operation.*
- virtual Cdr\_DllAPI [~BadParamException](#) () noexcept  
*Default constructor.*
- virtual Cdr\_DllAPI void [raise](#) () const  
*This function throws the object as exception.*

### Static Public Attributes

- static const Cdr\_DllAPI char \*const [BAD\\_PARAM\\_MESSAGE\\_DEFAULT](#)  
*Default message used in the library.*

## Additional Inherited Members

### 5.2.1 Detailed Description

This class is thrown as an exception when a invalid parameter was being serialized.

### 5.2.2 Constructor & Destructor Documentation

#### 5.2.2.1 BadParamException() [1/2]

```
Cdr_DllAPI BadParamException (
    const char *const & message ) [noexcept]
```

Default constructor.

##### Parameters

<i>message</i>	A error message. This message pointer is copied.
----------------	--

#### 5.2.2.2 BadParamException() [2/2]

```
Cdr_DllAPI BadParamException (
    const BadParamException & ex ) [noexcept]
```

Default copy constructor.

##### Parameters

<i>ex</i>	<a href="#">BadParamException</a> that will be copied.
-----------	--

#### 5.2.2.3 ~BadParamException()

```
virtual Cdr_DllAPI ~BadParamException ( ) [virtual], [noexcept]
```

Default constructor.

### 5.2.3 Member Function Documentation

### 5.2.3.1 operator=()

```
Cdr_DllAPI BadParamException& operator= (
    const BadParamException & ex ) [noexcept]
```

Assignment operation.

#### Parameters

ex	BadParamException that will be copied.
----	--

### 5.2.3.2 raise()

```
virtual Cdr_DllAPI void raise ( ) const [virtual]
```

This function throws the object as exception.

Implements [Exception](#).

## 5.2.4 Member Data Documentation

### 5.2.4.1 BAD\_PARAM\_MESSAGE\_DEFAULT

```
const Cdr_DllAPI char* const BAD_PARAM_MESSAGE_DEFAULT [static]
```

Default message used in the library.

The documentation for this class was generated from the following file:

- include/fastcdr/exceptions/BadParamException.h

## 5.3 Cdr Class Reference

This class offers an interface to serialize/deserialize some basic types using CDR protocol inside an [eprosima::fastcdr::FastBuffer](#).

```
#include <Cdr.h>
```

### Classes

- class [state](#)

*This class stores the current state of a CDR serialization.*

## Public Types

- enum `CdrType` { `CORBA_CDR`, `DDS_CDR` }  
*This enumeration represents the two kinds of CDR serialization supported by eprosima::fastcdr::CDR.*
- enum `DDSCdrPIFlag` { `DDS_CDR_WITHOUT_PL` = 0x0, `DDS_CDR_WITH_PL` = 0x2 }  
*This enumeration represents the two possible values of the flag that points if the content is a parameter list (only in DDS CDR).*
- enum `Endianness` { `BIG_ENDIANNESS` = 0x0, `LITTLE_ENDIANNESS` = 0x1 }  
*This enumeration represents endianness types.*

## Public Member Functions

- `Cdr` (`FastBuffer` &cdrBuffer, const `Endianness` endianness=DEFAULT\_ENDIAN, const `CdrType` cdr↔Type=CORBA\_CDR)  
*This constructor creates an eprosima::fastcdr::Cdr object that can serialize/deserialize the assigned buffer.*
- `Cdr` & `read_encapsulation` ()  
*This function reads the encapsulation of the CDR stream.*
- `Cdr` & `serialize_encapsulation` ()  
*This function writes the encapsulation of the CDR stream.*
- `DDSCdrPIFlag` `getDDSCdrPIFlag` () const  
*This function returns the parameter list flag when the CDR type is eprosima::fastcdr::DDS\_CDR.*
- void `setDDSCdrPIFlag` (`DDSCdrPIFlag` pIFlag)  
*This function sets the parameter list flag when the CDR type is eprosima::fastcdr::DDS\_CDR.*
- `uint16_t` `getDDSCdrOptions` () const  
*This function returns the option flags when the CDR type is eprosima::fastcdr::DDS\_CDR.*
- void `setDDSCdrOptions` (`uint16_t` options)  
*This function sets the option flags when the CDR type is eprosima::fastcdr::DDS\_CDR.*
- void `changeEndianness` (`Endianness` endianness)  
*This function sets the current endianness used by the CDR type.*
- `Endianness` `endianness` () const  
*This function returns the current endianness used by the CDR type.*
- bool `jump` (`size_t` numBytes)  
*This function skips a number of bytes in the CDR stream buffer.*
- void `reset` ()  
*This function resets the current position in the buffer to the beginning.*
- char \* `getBufferPointer` ()  
*This function returns the pointer to the current used buffer.*
- char \* `getCurrentPosition` ()  
*This function returns the current position in the CDR stream.*
- `size_t` `getSerializedDataLength` () const  
*This function returns the length of the serialized data inside the stream.*
- `state` `getState` ()  
*This function returns the current state of the CDR serialization process.*
- void `setState` (`state` &state)  
*This function sets a previous state of the CDR serialization process;.*
- bool `moveAlignmentForward` (`size_t` numBytes)  
*This function moves the alignment forward.*
- void `resetAlignment` ()  
*This function resets the alignment to the current position in the buffer.*
- `Cdr` & `operator<<` (const `uint8_t` octet\_t)

- This operator serializes an octet.*

  - `Cdr & operator<< (const char char_t)`

*This operator serializes a character.*
- `Cdr & operator<< (const int8_t int8)`

*This operator serializes a int8\_t.*
- `Cdr & operator<< (const uint16_t ushort_t)`

*This operator serializes an unsigned short.*
- `Cdr & operator<< (const int16_t short_t)`

*This operator serializes a short.*
- `Cdr & operator<< (const uint32_t ulong_t)`

*This operator serializes an unsigned long.*
- `Cdr & operator<< (const int32_t long_t)`

*This operator serializes a long.*
- `Cdr & operator<< (const wchar_t wchar)`

*This operator serializes a wide-char.*
- `Cdr & operator<< (const uint64_t ulonglong_t)`

*This operator serializes an unsigned long long.*
- `Cdr & operator<< (const int64_t longlong_t)`

*This operator serializes a long long.*
- `Cdr & operator<< (const float float_t)`

*This operator serializes a float.*
- `Cdr & operator<< (const double double_t)`

*This operator serializes a double.*
- `Cdr & operator<< (const long double ldouble_t)`

*This operator serializes a long double.*
- `Cdr & operator<< (const bool bool_t)`

*This operator serializes a boolean.*
- `Cdr & operator<< (const char *string_t)`

*This operator serializes a null-terminated c-string.*
- `Cdr & operator<< (char *string_t)`

*This operator serializes a null-terminated c-string.*
- `Cdr & operator<< (const std::string &string_t)`

*This operator serializes a string.*
- `Cdr & operator<< (const std::wstring &string_t)`

*This operator serializes a wstring.*
- `template<class _T >`  
`Cdr & operator<< (const std::vector< _T > &vector_t)`  
*This operator template is used to serialize sequences.*
- `template<class _K , class _T >`  
`Cdr & operator<< (const std::map< _K, _T > &map_t)`  
*This operator template is used to serialize maps.*
- `template<class _T >`  
`Cdr & operator<< (const _T &type_t)`  
*This operator template is used to serialize any other non-basic type.*
- `Cdr & operator>> (uint8_t &octet_t)`

*This operator deserializes an octet.*
- `Cdr & operator>> (char &char_t)`

*This operator deserializes a character.*
- `Cdr & operator>> (int8_t &int8)`

*This operator deserializes a int8\_t.*
- `Cdr & operator>> (uint16_t &ushort_t)`

- This operator deserializes an unsigned short.*

  - `Cdr & operator>> (int16_t &short_t)`

*This operator deserializes a short.*
- `Cdr & operator>> (uint32_t &ulong_t)`

*This operator deserializes an unsigned long.*
- `Cdr & operator>> (int32_t &long_t)`

*This operator deserializes a long.*
- `Cdr & operator>> (wchar_t &wchar)`

*This operator deserializes a wide-char.*
- `Cdr & operator>> (uint64_t &ulonglong_t)`

*This operator deserializes a unsigned long long.*
- `Cdr & operator>> (int64_t &longlong_t)`

*This operator deserializes a long long.*
- `Cdr & operator>> (float &float_t)`

*This operator deserializes a float.*
- `Cdr & operator>> (double &double_t)`

*This operator deserializes a double.*
- `Cdr & operator>> (long double &ldouble_t)`

*This operator deserializes a long double.*
- `Cdr & operator>> (bool &bool_t)`

*This operator deserializes a boolean.*
- `Cdr & operator>> (char *&string_t)`

*This operator deserializes a null-terminated c-string.*
- `Cdr & operator>> (std::string &string_t)`

*This operator deserializes a string.*
- `Cdr & operator>> (std::wstring &string_t)`

*This operator deserializes a string.*
- `template<class _T >`

### 5.3.1 Detailed Description

This class offers an interface to serialize/deserialize some basic types using CDR protocol inside an [eprosima::fastcdr::FastBuffer](#).

### 5.3.2 Member Enumeration Documentation

#### 5.3.2.1 CdrType

`enum` [CdrType](#)

This enumeration represents the two kinds of CDR serialization supported by [eprosima::fastcdr::CDR](#).

Enumerator

<code>CORBA_CDR</code>	Common CORBA CDR serialization.
<code>DDS_CDR</code>	DDS CDR serialization.

#### 5.3.2.2 DDSCdrPIFlag

`enum` [DDSCdrPIFlag](#)

This enumeration represents the two possible values of the flag that points if the content is a parameter list (only in DDS CDR).

## Enumerator

DDS_CDR_WITHOUT_PL	Specifies that the content is not a parameter list.
DDS_CDR_WITH_PL	Specifies that the content is a parameter list.

## 5.3.2.3 Endianness

enum [Endianness](#)

This enumeration represents endianness types.

## Enumerator

BIG_ENDIANNESS	Big endianness.
LITTLE_ENDIANNESS	Little endianness.

## 5.3.3 Constructor &amp; Destructor Documentation

## 5.3.3.1 Cdr()

```
Cdr (
    FastBuffer & cdrBuffer,
    const Endianness endianness = DEFAULT_ENDIAN,
    const CdrType cdrType = CORBA_CDR )
```

This constructor creates an [eprosima::fastcdr::Cdr](#) object that can serialize/deserialize the assigned buffer.

## Parameters

<i>cdrBuffer</i>	A reference to the buffer that contains (or will contain) the CDR representation.
<i>endianness</i>	The initial endianness that will be used. The default value is the endianness of the system.
<i>cdrType</i>	Represents the type of CDR that will be used in serialization/deserialization. The default value is CORBA CDR.

## 5.3.4 Member Function Documentation

## 5.3.4.1 alignment()

```
static size_t alignment (
    size_t current_alignment,
```

```
size_t dataSize ) [inline], [static]
```

Get the number of bytes needed to align a position to certain data size.

#### Parameters

<i>current_alignment</i>	Position to be aligned.
<i>dataSize</i>	Size of next data to process (should be power of two).

#### Returns

Number of required alignment bytes.

### 5.3.4.2 changeEndianness()

```
void changeEndianness (
    Endianness endianness )
```

This function sets the current endianness used by the CDR type.

#### Parameters

<i>endianness</i>	The new endianness value.
-------------------	---------------------------

### 5.3.4.3 deserialize() [1/40]

```
Cdr& deserialize (
    _T & type_t ) [inline]
```

This function template deserializes a non-basic object.

#### Parameters

<i>type</i> ↔ <i>_t</i>	The variable that will store the object read from the buffer.
----------------------------	---

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.4 deserialize()** [2/40]

```
Cdr& deserialize (
    bool & bool_t )
```

This function deserializes a boolean.

**Parameters**

<i>bool_t</i>	The variable that will store the boolean read from the buffer.
---------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
<a href="#">exception::BadParamException</a>	This exception is thrown when trying to deserialize an invalid value.

**5.3.4.5 deserialize()** [3/40]

```
Cdr& deserialize (
    bool & bool_t,
    Endianness endianness ) [inline]
```

This function deserializes a boolean with a different endianness.

**Parameters**

<i>bool_t</i>	The variable that will store the boolean read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
<a href="#">exception::BadParamException</a>	This exception is thrown when trying to deserialize an invalid value.

#### 5.3.4.6 deserialize() [4/40]

```
Cdr& deserialize (
    char & char_t )
```

This function deserializes a character.

##### Parameters

<i>char_t</i>	The variable that will store the character read from the buffer.
---------------	--

##### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

##### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

#### 5.3.4.7 deserialize() [5/40]

```
Cdr& deserialize (
    char & char_t,
    Endianness endianness ) [inline]
```

This function deserializes a character with a different endianness.

##### Parameters

<i>char_t</i>	The variable that will store the character read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

##### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

##### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.8 deserialize()** [6/40]

```
Cdr& deserialize (
    char *& string_t )
```

This function deserializes a string.

This function allocates memory to store the string. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using free()

**Parameters**

<i>string_t</i>	The pointer that will point to the string read from the buffer. The user will have to free the allocated memory using free()
-----------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.9 deserialize()** [7/40]

```
Cdr& deserialize (
    char *& string_t,
    Endianness endianness )
```

This function deserializes a string with a different endianness.

This function allocates memory to store the string. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using free()

**Parameters**

<i>string_t</i>	The pointer that will point to the string read from the buffer.
<i>endianness</i>	Endianness that will be used in the deserialization of this value. The user will have to free the allocated memory using free()

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.10 deserialize()** [8/40]

```
Cdr& deserialize (
    double & double_t )
```

This function deserializes a double.

## Parameters

<i>double_t</i>	The variable that will store the double read from the buffer.
-----------------	---

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.11 deserialize()** [9/40]

```
Cdr& deserialize (
    double & double_t,
    Endianness endianness )
```

This function deserializes a double with a different endianness.

## Parameters

<i>double_t</i>	The variable that will store the double read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

5.3.4.12 `deserialize()` [10/40]

```
Cdr& deserialize (
    float & float_t )
```

This function deserializes a float.

## Parameters

<code>float_t</code>	The variable that will store the float read from the buffer.
----------------------	--

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

5.3.4.13 `deserialize()` [11/40]

```
Cdr& deserialize (
    float & float_t,
    Endianness endianness )
```

This function deserializes a float with a different endianness.

## Parameters

<code>float_t</code>	The variable that will store the float read from the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.14 deserialize()** [12/40]

```
Cdr& deserialize (
    int16_t & short_t )
```

This function deserializes a short.

## Parameters

<i>short_t</i>	The variable that will store the short read from the buffer.
----------------	--

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.15 deserialize()** [13/40]

```
Cdr& deserialize (
    int16_t & short_t,
    Endianness endianness )
```

This function deserializes a short with a different endianness.

## Parameters

<i>short_t</i>	The variable that will store the short read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.16 deserialize()** [14/40]

```
Cdr& deserialize (
    int32_t & long_t )
```

This function deserializes a long.

## Parameters

<code>long_t</code>	The variable that will store the long read from the buffer.
---------------------	---

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.17 deserialize()** [15/40]

```
Cdr& deserialize (
    int32_t & long_t,
    Endianness endianness )
```

This function deserializes a long with a different endianness.

## Parameters

<code>long_t</code>	The variable that will store the long read from the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.18 deserialize()** [16/40]

```
Cdr& deserialize (
    int64_t & longlong_t )
```

This function deserializes a long long.

## Parameters

<i>longlong_t</i>	The variable that will store the long long read from the buffer.
-------------------	--

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.19 deserialize()** [17/40]

```
Cdr& deserialize (
    int64_t & longlong_t,
    Endianness endianness )
```

This function deserializes a long long with a different endianness.

## Parameters

<i>longlong_t</i>	The variable that will store the long long read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.20 deserialize()** [18/40]

```
Cdr& deserialize (  
    int8_t & int8 ) [inline]
```

This function deserializes an `int8_t`.

## Parameters

<i>int8</i>	The variable that will store the <code>int8_t</code> read from the buffer.
-------------	--

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.21 deserialize()** [19/40]

```
Cdr& deserialize (  
    int8_t & int8,  
    Endianness endianness ) [inline]
```

This function deserializes an `int8_t` with a different endianness.

## Parameters

<i>int8</i>	The variable that will store the <code>int8_t</code> read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.22 deserialize()** [20/40]

```
Cdr& deserialize (
    long double & ldouble_t )
```

This function deserializes a long double.

## Parameters

<i>ldouble_t</i>	The variable that will store the long double read from the buffer.
------------------	--

## Returns

Reference to the [`eprosima::fastcdr::Cdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

## Note

Due to internal representation differences, WIN32 and \*NIX like systems are not compatible.

**5.3.4.23 deserialize()** [21/40]

```
Cdr& deserialize (
    long double & ldouble_t,
    Endianness endianness )
```

This function deserializes a long double with a different endianness.

## Parameters

<i>ldouble_t</i>	The variable that will store the long double read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

## Note

Due to internal representation differences, WIN32 and \*NIX like systems are not compatible.

**5.3.4.24 deserialize()** [22/40]

```
Cdr& deserialize (
    std::map< _K, _T > & map_t ) [inline]
```

This function template deserializes a map.

## Parameters

<i>map</i> ↔ <i>_t</i>	The variable that will store the map read from the buffer.
---------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.25 deserialize()** [23/40]

```
Cdr& deserialize (
    std::string & string_t ) [inline]
```

This function deserializes a std::string.

## Parameters

<i>string</i> ↔ <i>_t</i>	The variable that will store the string read from the buffer.
------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.26 deserialize()** [24/40]

```
Cdr& deserialize (
    std::string & string_t,
    Endianness endianness ) [inline]
```

This function deserializes a string with a different endianness.

## Parameters

<i>string_t</i>	The variable that will store the string read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.27 deserialize()** [25/40]

```
Cdr& deserialize (
    std::vector< _T > & vector_t ) [inline]
```

This function template deserializes a sequence.

## Parameters

<i>vector</i> ↔ <i>_t</i>	The variable that will store the sequence read from the buffer.
------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

## 5.3.4.28 deserialize() [26/40]

```
Cdr& deserialize (
    std::vector< _T > & vector_t,
    Endianness endianness ) [inline]
```

This function template deserializes a sequence with a different endianness.

## Parameters

<i>vector_t</i>	The variable that will store the sequence read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

## 5.3.4.29 deserialize() [27/40]

```
Cdr& deserialize (
    std::wstring & string_t ) [inline]
```

This function deserializes a std::string.

## Parameters

<i>string_t</i>	The variable that will store the string read from the buffer.
-----------------	---

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.30 deserialize() [28/40]**

```
Cdr& deserialize (
    std::wstring & string_t,
    Endianness endianness ) [inline]
```

This function deserializes a string with a different endianness.

**Parameters**

<i>string_t</i>	The variable that will store the string read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.31 deserialize() [29/40]**

```
Cdr& deserialize (
    uint16_t & ushort_t ) [inline]
```

This function deserializes an unsigned short.

**Parameters**

<i>ushort_t</i>	The variable that will store the unsigned short read from the buffer.
-----------------	---

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.32 deserialize()** [30/40]

```
Cdr& deserialize (
    uint16_t & ushort_t,
    Endianness endianness ) [inline]
```

This function deserializes an unsigned short with a different endianness.

## Parameters

<code>ushort_t</code>	The variable that will store the unsigned short read from the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.33 deserialize()** [31/40]

```
Cdr& deserialize (
    uint32_t & ulong_t ) [inline]
```

This function deserializes an unsigned long.

## Parameters

<code>ulong_t</code>	The variable that will store the unsigned long read from the buffer.
----------------------	--

**Returns**

Reference to the `eprosima::fastcdr::Cdr` object.

**Exceptions**

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.34 deserialize() [32/40]**

```
Cdr& deserialize (
    uint32_t & ulong_t,
    Endianness endianness ) [inline]
```

This function deserializes an unsigned long with a different endianness.

**Parameters**

<code>ulong_t</code>	The variable that will store the unsigned long read from the buffer..
<code>endianness</code>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the `eprosima::fastcdr::Cdr` object.

**Exceptions**

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.35 deserialize() [33/40]**

```
Cdr& deserialize (
    uint64_t & ulonglong_t ) [inline]
```

This function deserializes an unsigned long long.

**Parameters**

<code>ulonglong_t</code>	The variable that will store the unsigned long long read from the buffer.
--------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.36 deserialize()** [34/40]

```
Cdr& deserialize (
    uint64_t & ulonglong_t,
    Endianness endianness ) [inline]
```

This function deserializes an unsigned long long with a different endianness.

## Parameters

<i>ulonglong_t</i>	The variable that will store the unsigned long long read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.37 deserialize()** [35/40]

```
Cdr& deserialize (
    uint8_t & octet_t ) [inline]
```

This function deserializes an octet.

## Parameters

<i>octet_t</i>	The variable that will store the octet read from the buffer.
----------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.38 deserialize() [36/40]**

```
Cdr& deserialize (
    uint8_t & octet_t,
    Endianness endianness ) [inline]
```

This function deserializes an octet with a different endianness.

**Parameters**

<i>octet_t</i>	The variable that will store the octet read from the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.39 deserialize() [37/40]**

```
Cdr& deserialize (
    wchar_t & wchar ) [inline]
```

This function deserializes a wide-char.

**Parameters**

<i>wchar</i>	The variable that will store the wide-char read from the buffer.
--------------	--

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

5.3.4.40 `deserialize()` [38/40]

```
Cdr& deserialize (
    wchar_t & wchar,
    Endianness endianness ) [inline]
```

This function deserializes a wide-char with a different endianness.

## Parameters

<code>wchar</code>	The variable that will store the wide-char read from the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

5.3.4.41 `deserialize()` [39/40]

```
Cdr& deserialize (
    wchar_t *& string_t )
```

This function deserializes a wide string.

This function allocates memory to store the wide string. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using `free()`

## Parameters

<code>string_t</code>	The pointer that will point to the wide string read from the buffer. The user will have to free the allocated memory using <code>free()</code>
-----------------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.42 deserialize() [40/40]**

```
Cdr& deserialize (
    wchar_t *& string_t,
    Endianness endianness )
```

This function deserializes a wide string with a different endianness.

This function allocates memory to store the wide string. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using free()

**Parameters**

<i>string_t</i>	The pointer that will point to the wide string read from the buffer.
<i>endianness</i>	Endianness that will be used in the deserialization of this value. The user will have to free the allocated memory using free()

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.43 deserializeArray() [1/35]**

```
Cdr& deserializeArray (
    _T * type_t,
    size_t numElements ) [inline]
```

This function template deserializes an array of non-basic objects.

## Parameters

<i>type_t</i>	The variable that will store the array of objects read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.44 deserializeArray() [2/35]**

```
Cdr& deserializeArray (  
    _T * type_t,  
    size_t numElements,  
    Endianness endianness ) [inline]
```

This function template deserializes an array of non-basic objects with a different endianness.

## Parameters

<i>type_t</i>	The variable that will store the array of objects read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.45 deserializeArray() [3/35]**

```
Cdr& deserializeArray (  
    bool * bool_t,  
    size_t numElements )
```

This function deserializes an array of booleans.

## Parameters

<i>bool_t</i>	The variable that will store the array of booleans read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.46 deserializeArray()** [4/35]

```
Cdr& deserializeArray (  
    bool * bool_t,  
    size_t numElements,  
    Endianness endianness ) [inline]
```

This function deserializes an array of booleans with a different endianness.

## Parameters

<i>bool_t</i>	The variable that will store the array of booleans read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.47 deserializeArray()** [5/35]

```
Cdr& deserializeArray (  
    char * char_t,  
    size_t numElements )
```

This function deserializes an array of characters.

## Parameters

<i>char_t</i>	The variable that will store the array of characters read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.48 deserializeArray() [6/35]**

```
Cdr& deserializeArray (  
    char * char_t,  
    size_t numElements,  
    Endianness endianness ) [inline]
```

This function deserializes an array of characters with a different endianness.

## Parameters

<i>char_t</i>	The variable that will store the array of characters read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.49 deserializeArray() [7/35]**

```
Cdr& deserializeArray (  
    double * double_t,  
    size_t numElements )
```

This function deserializes an array of doubles.

## Parameters

<i>double_t</i>	The variable that will store the array of doubles read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.50 deserializeArray() [8/35]**

```
Cdr& deserializeArray (
    double * double_t,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of doubles with a different endianness.

## Parameters

<i>double_t</i>	The variable that will store the array of doubles read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.51 deserializeArray() [9/35]**

```
Cdr& deserializeArray (
    float * float_t,
    size_t numElements )
```

This function deserializes an array of floats.

## Parameters

<i>float_t</i>	The variable that will store the array of floats read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.52 deserializeArray()** [10/35]

```
Cdr& deserializeArray (
    float * float_t,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of floats with a different endianness.

## Parameters

<i>float_t</i>	The variable that will store the array of floats read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.53 deserializeArray()** [11/35]

```
Cdr& deserializeArray (
    int16_t * short_t,
    size_t numElements )
```

This function deserializes an array of shorts.

## Parameters

<i>short_t</i>	The variable that will store the array of shorts read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.54 deserializeArray()** [12/35]

```
Cdr& deserializeArray (
    int16_t * short_t,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of shorts with a different endianness.

## Parameters

<i>short_t</i>	The variable that will store the array of shorts read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.55 deserializeArray()** [13/35]

```
Cdr& deserializeArray (
    int32_t * long_t,
    size_t numElements )
```

This function deserializes an array of longs.

## Parameters

<i>long_t</i>	The variable that will store the array of longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.56 deserializeArray()** [14/35]

```
Cdr& deserializeArray (
    int32_t * long_t,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of longs with a different endianness.

## Parameters

<i>long_t</i>	The variable that will store the array of longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.57 deserializeArray()** [15/35]

```
Cdr& deserializeArray (
    int64_t * longlong_t,
    size_t numElements )
```

This function deserializes an array of long longs.

## Parameters

<i>longlong_t</i>	The variable that will store the array of long longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.58 deserializeArray()** [16/35]

```
Cdr& deserializeArray (
    int64_t * longlong_t,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of long longs with a different endianness.

## Parameters

<i>longlong_t</i>	The variable that will store the array of long longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.59 deserializeArray()** [17/35]

```
Cdr& deserializeArray (
    int8_t * int8,
    size_t numElements ) [inline]
```

This function deserializes an array of `int8_t`.

## Parameters

<i>int8</i>	The variable that will store the array of <code>int8_t</code> read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.60 deserializeArray()** [18/35]

```
Cdr& deserializeArray (
    int8_t * int8,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of `int8_t` with a different endianness.

## Parameters

<i>int8</i>	The variable that will store the array of <code>int8_t</code> read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.61 deserializeArray()** [19/35]

```
Cdr& deserializeArray (
    long double * ldoube_t,
    size_t numElements )
```

This function deserializes an array of long doubles.

## Parameters

<i>ldouble_t</i>	The variable that will store the array of long doubles read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.62 deserializeArray()** [20/35]

```
Cdr& deserializeArray (
    long double * ldouble_t,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of long doubles with a different endianness.

## Parameters

<i>ldouble_t</i>	The variable that will store the array of long doubles read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.63 deserializeArray()** [21/35]

```
Cdr& deserializeArray (
    std::string * string_t,
    size_t numElements ) [inline]
```

This function deserializes an array of strings.

## Parameters

<i>string_t</i>	The variable that will store the array of strings read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.64 deserializeArray()** [22/35]

```
Cdr& deserializeArray (
    std::string * string_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of strings with a different endianness.

## Parameters

<i>string_t</i>	The variable that will store the array of strings read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.65 deserializeArray()** [23/35]

```
Cdr& deserializeArray (
    std::vector< _T > * vector_t,
    size_t numElements ) [inline]
```

This function deserializes an array of sequences of objects.

## Parameters

<i>vector_t</i>	The variable that will store the array of sequences of objects read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.66 deserializeArray()** [24/35]

```
Cdr& deserializeArray (
    std::wstring * string_t,
    size_t numElements ) [inline]
```

This function deserializes an array of wide-strings.

## Parameters

<i>string_t</i>	The variable that will store the array of wide-strings read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.67 deserializeArray()** [25/35]

```
Cdr& deserializeArray (
    std::wstring * string_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of wide-strings with a different endianness.

## Parameters

<i>string_t</i>	The variable that will store the array of wide-strings read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.68 deserializeArray()** [26/35]

```
Cdr& deserializeArray (
    uint16_t * ushort_t,
    size_t numElements ) [inline]
```

This function deserializes an array of unsigned shorts.

## Parameters

<i>ushort_t</i>	The variable that will store the array of unsigned shorts read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.69 deserializeArray()** [27/35]

```
Cdr& deserializeArray (
    uint16_t * ushort_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of unsigned shorts with a different endianness.

## Parameters

<i>ushort_t</i>	The variable that will store the array of unsigned shorts read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.70 deserializeArray()** [28/35]

```
Cdr& deserializeArray (
    uint32_t * ulong_t,
    size_t numElements ) [inline]
```

This function deserializes an array of unsigned longs.

## Parameters

<i>ulong_t</i>	The variable that will store the array of unsigned longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.71 deserializeArray()** [29/35]

```
Cdr& deserializeArray (
    uint32_t * ulong_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of unsigned longs with a different endianness.

## Parameters

<i>ulong_t</i>	The variable that will store the array of unsigned longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.72 deserializeArray()** [30/35]

```
Cdr& deserializeArray (
    uint64_t * ulonglong_t,
    size_t numElements ) [inline]
```

This function deserializes an array of unsigned long longs.

## Parameters

<i>ulonglong_t</i>	The variable that will store the array of unsigned long longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.73 deserializeArray()** [31/35]

```
Cdr& deserializeArray (
    uint64_t * ulonglong_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of unsigned long longs with a different endianness.

## Parameters

<i>ulonglong_t</i>	The variable that will store the array of unsigned long longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.74 deserializeArray()** [32/35]

```
Cdr& deserializeArray (
    uint8_t * octet_t,
    size_t numElements ) [inline]
```

This function deserializes an array of octets.

## Parameters

<i>octet_t</i>	The variable that will store the array of octets read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.75 deserializeArray()** [33/35]

```
Cdr& deserializeArray (
    uint8_t * octet_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function deserializes an array of octets with a different endianness.

## Parameters

<i>octet_t</i>	The variable that will store the array of octets read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.76 deserializeArray()** [34/35]

```
Cdr& deserializeArray (
    wchar_t * wchar,
    size_t numElements )
```

This function deserializes an array of wide-chars.

## Parameters

<i>wchar</i>	The variable that will store the array of wide-chars read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.77 deserializeArray()** [35/35]

```
Cdr& deserializeArray (
    wchar_t * wchar,
    size_t numElements,
    Endianness endianness )
```

This function deserializes an array of wide-chars with a different endianness.

## Parameters

<i>wchar</i>	The variable that will store the array of wide-chars read from the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

## 5.3.4.78 deserializeSequence() [1/2]

```
Cdr& deserializeSequence (
    _T *& sequence_t,
    size_t & numElements ) [inline]
```

This function template deserializes a raw sequence.

This function allocates memory to store the sequence. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using free()

## Parameters

<i>sequence_t</i>	The pointer that will store the sequence read from the buffer.
<i>numElements</i>	This variable return the number of elements of the sequence.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

## 5.3.4.79 deserializeSequence() [2/2]

```
Cdr& deserializeSequence (
    _T *& sequence_t,
```

```
size_t & numElements,  
Endianness endianness ) [inline]
```

This function template deserializes a raw sequence with a different endianness.

This function allocates memory to store the sequence. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using `free()`

#### Parameters

<i>sequence_t</i>	The pointer that will store the sequence read from the buffer.
<i>numElements</i>	This variable return the number of elements of the sequence.
<i>endianness</i>	Endianness that will be used in the deserialization of this value.

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

#### 5.3.4.80 endianness()

```
Endianness endianness ( ) const [inline]
```

This function returns the current endianness used by the CDR type.

#### Returns

The endianness.

#### 5.3.4.81 getBufferPointer()

```
char* getBufferPointer ( )
```

This function returns the pointer to the current used buffer.

#### Returns

Pointer to the starting position of the buffer.

#### 5.3.4.82 `getCurrentPosition()`

```
char* getCurrentPosition ( )
```

This function returns the current position in the CDR stream.

##### Returns

Pointer to the current position in the buffer.

#### 5.3.4.83 `getDDSCdrOptions()`

```
uint16_t getDDSCdrOptions ( ) const
```

This function returns the option flags when the CDR type is `eprosima::fastcdr::DDS_CDR`.

##### Returns

The option flags.

#### 5.3.4.84 `getDDSCdrPlFlag()`

```
DDSCdrPlFlag getDDSCdrPlFlag ( ) const
```

This function returns the parameter list flag when the CDR type is `eprosima::fastcdr::DDS_CDR`.

##### Returns

The flag that specifies if the content is a parameter list.

#### 5.3.4.85 `getSerializedDataLength()`

```
size_t getSerializedDataLength ( ) const [inline]
```

This function returns the length of the serialized data inside the stream.

##### Returns

The length of the serialized data.

#### 5.3.4.86 getState()

```
state getState ( )
```

This function returns the current state of the CDR serialization process.

##### Returns

The current state of the CDR serialization process.

#### 5.3.4.87 jump()

```
bool jump (
    size_t numBytes )
```

This function skips a number of bytes in the CDR stream buffer.

##### Parameters

<i>numBytes</i>	The number of bytes that will be jumped.
-----------------	--

##### Returns

True is returned when it works successfully. Otherwise, false is returned.

#### 5.3.4.88 moveAlignmentForward()

```
bool moveAlignmentForward (
    size_t numBytes )
```

This function moves the alignment forward.

##### Parameters

<i>numBytes</i>	The number of bytes the alignment should advance.
-----------------	---

##### Returns

True If alignment was moved successfully.

**5.3.4.89 operator<<() [1/21]**

```
Cdr& operator<< (
    char * string_t ) [inline]
```

This operator serializes a null-terminated c-string.

**Parameters**

<i>string_t</i>	Pointer to the beginning of the string that will be serialized in the buffer.
-----------------	---

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.90 operator<<() [2/21]**

```
Cdr& operator<< (
    const _T & type_t ) [inline]
```

This operator template is used to serialize any other non-basic type.

**Parameters**

<i>type_t</i>	A reference to the object that will be serialized in the buffer.
---------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.91 operator<<() [3/21]**

```
Cdr& operator<< (
```

```
const bool bool_t ) [inline]
```

This operator serializes a boolean.

#### Parameters

<i>bool_t</i>	The value of the boolean that will be serialized in the buffer.
---------------	---

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

#### 5.3.4.92 operator<<() [4/21]

```
Cdr& operator<< (
    const char * string_t ) [inline]
```

This operator serializes a null-terminated c-string.

#### Parameters

<i>string_t</i>	Pointer to the beginning of the string that will be serialized in the buffer.
-----------------	---

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

#### 5.3.4.93 operator<<() [5/21]

```
Cdr& operator<< (
    const char char_t ) [inline]
```

This operator serializes a character.

## Parameters

<i>char</i> ↔ _t	The value of the character that will be serialized in the buffer.
---------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.94 operator<<() [6/21]**

```
Cdr& operator<< (
    const double double_t ) [inline]
```

This operator serializes a double.

## Parameters

<i>double</i> ↔ _t	The value of the double that will be serialized in the buffer.
-----------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.95 operator<<() [7/21]**

```
Cdr& operator<< (
    const float float_t ) [inline]
```

This operator serializes a float.

## Parameters

<i>float</i> ↔ <i>_t</i>	The value of the float that will be serialized in the buffer.
-----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.96 operator<<() [8/21]**

```
Cdr& operator<< (
    const int16_t short_t ) [inline]
```

This operator serializes a short.

## Parameters

<i>short</i> ↔ <i>_t</i>	The value of the short that will be serialized in the buffer.
-----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.97 operator<<() [9/21]**

```
Cdr& operator<< (
    const int32_t long_t ) [inline]
```

This operator serializes a long.

## Parameters

<i>long</i> ↔ _t	The value of the long that will be serialized in the buffer.
---------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.98 operator<<() [10/21]**

```
Cdr& operator<< (
    const int64_t longlong_t ) [inline]
```

This operator serializes a long long.

## Parameters

<i>longlong</i> ↔ _t	The value of the long long that will be serialized in the buffer.
-------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.99 operator<<() [11/21]**

```
Cdr& operator<< (
    const int8_t int8 ) [inline]
```

This operator serializes a int8\_t.

## Parameters

<i>int8</i>	The value of the <code>int8_t</code> that will be serialized in the buffer.
-------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.100 operator<<() [12/21]**

```
Cdr& operator<< (
    const long double ldoube_t ) [inline]
```

This operator serializes a long double.

## Parameters

<i>ldouble</i> ↵ <i>_t</i>	The value of the long double that will be serialized in the buffer.
-------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.101 operator<<() [13/21]**

```
Cdr& operator<< (
    const std::map< _K, _T > & map_t ) [inline]
```

This operator template is used to serialize maps.

## Parameters

<i>map</i> ↔ _t	The map that will be serialized in the buffer.
--------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.102 operator<<() [14/21]**

```
Cdr& operator<< (
    const std::string & string_t ) [inline]
```

This operator serializes a string.

## Parameters

<i>string</i> ↔ _t	The string that will be serialized in the buffer.
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.103 operator<<() [15/21]**

```
Cdr& operator<< (
    const std::vector< _T > & vector_t ) [inline]
```

This operator template is used to serialize sequences.

## Parameters

<i>vector</i> <sub>↔</sub> <i>_t</i>	The sequence that will be serialized in the buffer.
---	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.104 operator<<()** [16/21]

```
Cdr& operator<< (
    const std::wstring & string_t ) [inline]
```

This operator serializes a wstring.

## Parameters

<i>string</i> <sub>↔</sub> <i>_t</i>	The wstring that will be serialized in the buffer.
---	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.105 operator<<()** [17/21]

```
Cdr& operator<< (
    const uint16_t ushort_t ) [inline]
```

This operator serializes an unsigned short.

## Parameters

<i>ushort</i> _t	The value of the unsigned short that will be serialized in the buffer.
---------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.106 operator<<() [18/21]**

```
Cdr& operator<< (
    const uint32_t ulong_t ) [inline]
```

This operator serializes an unsigned long.

## Parameters

<i>ulong</i> _t	The value of the unsigned long that will be serialized in the buffer.
--------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.107 operator<<() [19/21]**

```
Cdr& operator<< (
    const uint64_t ulonglong_t ) [inline]
```

This operator serializes an unsigned long long.

## Parameters

<code>ulonglong↔ _t</code>	The value of the unsigned long long that will be serialized in the buffer.
--------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.108 operator<<()** [20/21]

```
Cdr& operator<< (
    const uint8_t octet_t ) [inline]
```

This operator serializes an octet.

## Parameters

<code>octet↔ _t</code>	The value of the octet that will be serialized in the buffer.
----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.109 operator<<()** [21/21]

```
Cdr& operator<< (
    const wchar_t wchar ) [inline]
```

This operator serializes a wide-char.

## Parameters

<i>wchar</i>	The value of the wide-char that will be serialized in the buffer.
--------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.110 operator>>() [1/20]**

```
Cdr& operator>> (
    _T & type_t ) [inline]
```

This operator template is used to deserialize any other non-basic type.

## Parameters

<i>type</i> ↵ _t	The variable that will store the object read from the buffer.
---------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.111 operator>>() [2/20]**

```
Cdr& operator>> (
    bool & bool_t ) [inline]
```

This operator deserializes a boolean.

## Parameters

<i>bool</i> ↔ _t	The variable that will store the boolean read from the buffer.
---------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
<a href="#">exception::BadParamException</a>	This exception is thrown when trying to deserialize an invalid value.

**5.3.4.112 operator>>()** [3/20]

```
Cdr& operator>> (
    char & char_t ) [inline]
```

This operator deserializes a character.

## Parameters

<i>char</i> ↔ _t	The variable that will store the character read from the buffer.
---------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.113 operator>>()** [4/20]

```
Cdr& operator>> (
    char *& string_t ) [inline]
```

This operator deserializes a null-terminated c-string.

## Parameters

<i>string</i> ↔ _t	The variable that will store the c-string read from the buffer. Please note that a newly allocated string will be returned. The caller should free the returned pointer when appropriate.
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
<a href="#">exception::BadParamException</a>	This exception is thrown when trying to deserialize an invalid value.

**5.3.4.114 operator>>()** [5/20]

```
Cdr& operator>> (
    double & double_t ) [inline]
```

This operator deserializes a double.

## Parameters

<i>double</i> ↔ _t	The variable that will store the double read from the buffer.
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.115 operator>>()** [6/20]

```
Cdr& operator>> (
    float & float_t ) [inline]
```

This operator deserializes a float.

## Parameters

<i>float</i> ↔ _t	The variable that will store the float read from the buffer.
----------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.116 operator>>() [7/20]**

```
Cdr& operator>> (
    int16_t & short_t ) [inline]
```

This operator deserializes a short.

## Parameters

<i>short</i> ↔ _t	The variable that will store the short read from the buffer.
----------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.117 operator>>() [8/20]**

```
Cdr& operator>> (
    int32_t & long_t ) [inline]
```

This operator deserializes a long.

## Parameters

<i>long</i> ↔ _t	The variable that will store the long read from the buffer.
---------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.118 operator>>() [9/20]**

```
Cdr& operator>> (
    int64_t & longlong_t ) [inline]
```

This operator deserializes a long long.

## Parameters

<i>longlong</i> ↔ _t	The variable that will store the long long read from the buffer.
-------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.119 operator>>() [10/20]**

```
Cdr& operator>> (
    int8_t & int8 ) [inline]
```

This operator deserializes a int8\_t.

## Parameters

<i>int8</i>	The variable that will store the <code>int8_t</code> read from the buffer.
-------------	--

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.120 `operator>>()` [11/20]**

```
Cdr& operator>> (
    long double & ldouble_t ) [inline]
```

This operator deserializes a long double.

## Parameters

<i>ldouble</i> ← <i>_t</i>	The variable that will store the long double read from the buffer.
-------------------------------	--

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
--	---

**5.3.4.121 `operator>>()` [12/20]**

```
Cdr& operator>> (
    std::map< _K, _T > & map_t ) [inline]
```

This operator template is used to deserialize maps.

## Parameters

<i>map</i> ↔ _t	The variable that will store the map read from the buffer.
--------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.122 operator>>() [13/20]**

```
Cdr& operator>> (
    std::string & string_t ) [inline]
```

This operator deserializes a string.

## Parameters

<i>string</i> ↔ _t	The variable that will store the string read from the buffer.
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.123 operator>>() [14/20]**

```
Cdr& operator>> (
    std::vector< _T > & vector_t ) [inline]
```

This operator template is used to deserialize sequences.

## Parameters

<code>vector&lt; _t</code>	The variable that will store the sequence read from the buffer.
--------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.124 operator>>() [15/20]**

```
Cdr& operator>> (
    std::wstring & string_t ) [inline]
```

This operator deserializes a string.

## Parameters

<code>string&lt; _t</code>	The variable that will store the string read from the buffer.
--------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.125 operator>>() [16/20]**

```
Cdr& operator>> (
    uint16_t & ushort_t ) [inline]
```

This operator deserializes an unsigned short.

## Parameters

<code>ushort↔ _t</code>	The variable that will store the unsigned short read from the buffer.
-----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.126 operator>>() [17/20]**

```
Cdr& operator>> (
    uint32_t & ulong_t ) [inline]
```

This operator deserializes an unsigned long.

## Parameters

<code>ulong↔ _t</code>	The variable that will store the unsigned long read from the buffer.
----------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.127 operator>>>() [18/20]**

```
Cdr& operator>>> (
    uint64_t & ulonglong_t ) [inline]
```

This operator deserializes a unsigned long long.

## Parameters

<code>ulonglong↔ _t</code>	The variable that will store the unsigned long long read from the buffer.
--------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.128 operator>>() [19/20]**

```
Cdr& operator>> (
    uint8_t & octet_t ) [inline]
```

This operator deserializes an octet.

## Parameters

<code>octet↔ _t</code>	The variable that will store the octet read from the buffer.
----------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.129 operator>>() [20/20]**

```
Cdr& operator>> (
    wchar_t & wchar ) [inline]
```

This operator deserializes a wide-char.

## Parameters

<i>wchar</i>	The variable that will store the wide-char read from the buffer.
--------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
---	---

**5.3.4.130 read\_encapsulation()**

```
Cdr& read_encapsulation ( )
```

This function reads the encapsulation of the CDR stream.

If the CDR stream contains an encapsulation, then this function should be called before starting to deserialize.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
<a href="#">exception::BadParamException</a>	This exception is thrown when trying to deserialize an invalid value.

**5.3.4.131 reset()**

```
void reset ( )
```

This function resets the current position in the buffer to the beginning.

**5.3.4.132 resetAlignment()**

```
void resetAlignment ( ) [inline]
```

This function resets the alignment to the current position in the buffer.

**5.3.4.133 serialize()** [1/40]

```
Cdr& serialize (
    char * string_t ) [inline]
```

This function serializes a string.

**Parameters**

<i>string_t</i>	The pointer to the string that will be serialized in the buffer.
-----------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.134 serialize()** [2/40]

```
Cdr& serialize (
    const _T & type_t ) [inline]
```

This function template serializes a non-basic object.

**Parameters**

<i>type_t</i>	The object that will be serialized in the buffer.
---------------	---

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.135 serialize()** [3/40]

```
Cdr& serialize (
```

```
const bool bool_t )
```

This function serializes a boolean.

#### Parameters

<i>bool_t</i>	The value of the boolean that will be serialized in the buffer.
---------------	---

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

### 5.3.4.136 `serialize()` [4/40]

```
Cdr& serialize (
    const bool bool_t,
    Endianness endianness ) [inline]
```

This function serializes a boolean with a different endianness.

#### Parameters

<i>bool_t</i>	The value of the boolean that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

### 5.3.4.137 `serialize()` [5/40]

```
Cdr& serialize (
    const char * string_t )
```

This function serializes a string.

## Parameters

<i>string</i> ↔ <i>_t</i>	The pointer to the string that will be serialized in the buffer.
------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.138 serialize()** [6/40]

```
Cdr& serialize (
    const char * string_t,
    Endianness endianness )
```

This function serializes a string with a different endianness.

## Parameters

<i>string_t</i>	The pointer to the string that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.139 serialize()** [7/40]

```
Cdr& serialize (
    const char char_t )
```

This function serializes a character.

## Parameters

<code>char↔ _t</code>	The value of the character that will be serialized in the buffer.
---------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.140 serialize()** [8/40]

```
Cdr& serialize (
    const char char_t,
    Endianness endianness ) [inline]
```

This function serializes a character with a different endianness.

## Parameters

<code>char_t</code>	The value of the character that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.141 serialize()** [9/40]

```
Cdr& serialize (
    const double double_t )
```

This function serializes a double.

## Parameters

<i>double</i> ↔ <i>_t</i>	The value of the double that will be serialized in the buffer.
------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.142 serialize()** [10/40]

```
Cdr& serialize (
    const double double_t,
    Endianness endianness )
```

This function serializes a double with a different endianness.

## Parameters

<i>double_t</i>	The value of the double that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.143 serialize()** [11/40]

```
Cdr& serialize (
    const float float_t )
```

This function serializes a float.

## Parameters

<i>float</i> ↔ <i>_t</i>	The value of the float that will be serialized in the buffer.
-----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.144 serialize()** [12/40]

```
Cdr& serialize (
    const float float_t,
    Endianness endianness )
```

This function serializes a float with a different endianness.

## Parameters

<i>float_t</i>	The value of the float that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.145 serialize()** [13/40]

```
Cdr& serialize (
    const int16_t short_t )
```

This function serializes a short.

## Parameters

<code>short_t</code>	The value of the short that will be serialized in the buffer.
----------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.146 serialize()** [14/40]

```
Cdr& serialize (
    const int16_t short_t,
    Endianness endianness )
```

This function serializes a short with a different endianness.

## Parameters

<code>short_t</code>	The value of the short that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.147 serialize()** [15/40]

```
Cdr& serialize (
    const int32_t long_t )
```

This function serializes a long.

## Parameters

<code>long_t</code>	The value of the long that will be serialized in the buffer.
---------------------	--

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.148 serialize() [16/40]**

```
Cdr& serialize (
    const int32_t long_t,
    Endianness endianness )
```

This function serializes a long with a different endianness.

## Parameters

<code>long_t</code>	The value of the long that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.149 serialize() [17/40]**

```
Cdr& serialize (
    const int64_t longlong_t )
```

This function serializes a long long.

## Parameters

<i>longlong</i> ↔ _t	The value of the long long that will be serialized in the buffer.
-------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.150 serialize()** [18/40]

```
Cdr& serialize (
    const int64_t longlong_t,
    Endianness endianness )
```

This function serializes a long long with a different endianness.

## Parameters

<i>longlong</i> ↔ _t	The value of the long long that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.151 serialize()** [19/40]

```
Cdr& serialize (
    const int8_t int8 ) [inline]
```

This function serializes an int8\_t.

## Parameters

<i>int8</i>	The value of the <code>int8_t</code> that will be serialized in the buffer.
-------------	---

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.152 `serialize()`** [20/40]

```
Cdr& serialize (  
    const int8_t int8,  
    Endianness endianness ) [inline]
```

This function serializes an `int8_t` with a different endianness.

## Parameters

<i>int8</i>	The value of the <code>int8_t</code> that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.153 `serialize()`** [21/40]

```
Cdr& serialize (  
    const long double ldoube_t )
```

This function serializes a long double.

## Parameters

<i>ldouble</i> ↔ _t	The value of the long double that will be serialized in the buffer.
------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

## Note

Due to internal representation differences, WIN32 and \*NIX like systems are not compatible.

**5.3.4.154 serialize()** [22/40]

```
Cdr& serialize (
    const long double ldouble_t,
    Endianness endianness )
```

This function serializes a long double with a different endianness.

## Parameters

<i>ldouble_t</i>	The value of the long double that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

## Note

Due to internal representation differences, WIN32 and \*NIX like systems are not compatible.

**5.3.4.155 serialize()** [23/40]

```
Cdr& serialize (
    const std::map< _K, _T > & map_t ) [inline]
```

This function template serializes a map.

**Parameters**

<i>map</i> ↔ _t	The map that will be serialized in the buffer.
--------------------	--

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.156 serialize()** [24/40]

```
Cdr& serialize (
    const std::string & string_t ) [inline]
```

This function serializes a std::string.

**Parameters**

<i>string</i> ↔ _t	The string that will be serialized in the buffer.
-----------------------	---

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.157 serialize()** [25/40]

```
Cdr& serialize (
```

```
const std::string & string_t,
Endianness endianness ) [inline]
```

This function serializes a `std::string` with a different endianness.

#### Parameters

<i>string_t</i>	The string that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

#### Returns

Reference to the `eprosima::fastcdr::Cdr` object.

#### Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

### 5.3.4.158 `serialize()` [26/40]

```
Cdr& serialize (
const std::vector< _T > & vector_t ) [inline]
```

This function template serializes a sequence.

#### Parameters

<i>vector↔ _t</i>	The sequence that will be serialized in the buffer.
-----------------------	---

#### Returns

Reference to the `eprosima::fastcdr::Cdr` object.

#### Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

### 5.3.4.159 `serialize()` [27/40]

```
Cdr& serialize (
const std::vector< _T > & vector_t,
Endianness endianness ) [inline]
```

This function template serializes a sequence with a different endianness.

#### Parameters

<i>vector_t</i>	The sequence that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

#### 5.3.4.160 serialize() [28/40]

```
Cdr& serialize (
    const std::wstring & string_t ) [inline]
```

This function serializes a std::wstring.

#### Parameters

<i>string_t</i>	The wstring that will be serialized in the buffer.
-----------------	--

#### Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

#### Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

#### 5.3.4.161 serialize() [29/40]

```
Cdr& serialize (
    const uint16_t ushort_t ) [inline]
```

This function serializes an unsigned short.

## Parameters

<code>ushort_t</code>	The value of the unsigned short that will be serialized in the buffer.
-----------------------	--

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.162 serialize()** [30/40]

```
Cdr& serialize (
    const uint16_t ushort_t,
    Endianness endianness ) [inline]
```

This function serializes an unsigned short with a different endianness.

## Parameters

<code>ushort_t</code>	The value of the unsigned short that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.163 serialize()** [31/40]

```
Cdr& serialize (
    const uint32_t ulong_t ) [inline]
```

This function serializes an unsigned long.

## Parameters

<code>ulong_t</code>	The value of the unsigned long that will be serialized in the buffer.
----------------------	---

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.164 serialize()** [32/40]

```
Cdr& serialize (
    const uint32_t ulong_t,
    Endianness endianness ) [inline]
```

This function serializes an unsigned long with a different endianness.

## Parameters

<code>ulong_t</code>	The value of the unsigned long that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the `eprosima::fastcdr::Cdr` object.

## Exceptions

<code>exception::NotEnoughMemoryException</code>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.165 serialize()** [33/40]

```
Cdr& serialize (
    const uint64_t ulonglong_t ) [inline]
```

This function serializes an unsigned long long.

## Parameters

<code>ulonglong↔ _t</code>	The value of the unsigned long long that will be serialized in the buffer.
--------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.166 serialize()** [34/40]

```
Cdr& serialize (
    const uint64_t ulonglong_t,
    Endianness endianness ) [inline]
```

This function serializes an unsigned long long with a different endianness.

## Parameters

<code>ulonglong↔ _t</code>	The value of the unsigned long long that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.167 serialize()** [35/40]

```
Cdr& serialize (
    const uint8_t octet_t ) [inline]
```

This function serializes an octet.

## Parameters

<code>octet_t</code>	The value of the octet that will be serialized in the buffer.
----------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.168 serialize()** [36/40]

```
Cdr& serialize (
    const uint8_t octet_t,
    Endianness endianness ) [inline]
```

This function serializes an octet with a different endianness.

## Parameters

<code>octet_t</code>	The value of the octet that will be serialized in the buffer.
<code>endianness</code>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.169 serialize()** [37/40]

```
Cdr& serialize (
    const wchar_t * string_t )
```

This function serializes a wstring.

## Parameters

<i>string</i> ↔ <i>_t</i>	The pointer to the wstring that will be serialized in the buffer.
------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.170 serialize()** [38/40]

```
Cdr& serialize (
    const wchar_t * string_t,
    Endianness endianness )
```

This function serializes a wstring with a different endianness.

## Parameters

<i>string_t</i>	The pointer to the wstring that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.171 serialize()** [39/40]

```
Cdr& serialize (
    const wchar_t wchar ) [inline]
```

This function serializes a wide-char.

## Parameters

<i>wchar</i>	The value of the wide-char that will be serialized in the buffer.
--------------	---

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.172 serialize()** [40/40]

```
Cdr& serialize (
    const wchar_t wchar,
    Endianness endianness ) [inline]
```

This function serializes a wide-char with a different endianness.

## Parameters

<i>wchar</i>	The value of the wide-char that will be serialized in the buffer.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.173 serialize\_encapsulation()**

```
Cdr& serialize_encapsulation ( )
```

This function writes the encapsulation of the CDR stream.

If the CDR stream should contain an encapsulation, then this function should be called before starting to serialize.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.174 serializeArray()** [1/35]

```
Cdr& serializeArray (
    const _T * type_t,
    size_t numElements ) [inline]
```

This function template serializes an array of non-basic objects.

## Parameters

<i>type_t</i>	The array of objects that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::Cdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
--	---

**5.3.4.175 serializeArray()** [2/35]

```
Cdr& serializeArray (
    const _T * type_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function template serializes an array of non-basic objects with a different endianness.

## Parameters

<i>type_t</i>	The array of objects that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.176 serializeArray() [3/35]**

```
Cdr& serializeArray (
    const bool * bool_t,
    size_t numElements )
```

This function serializes an array of booleans.

## Parameters

<i>bool_t</i>	The array of booleans that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.177 serializeArray() [4/35]**

```
Cdr& serializeArray (
    const bool * bool_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of booleans with a different endianness.

## Parameters

<i>bool_t</i>	The array of booleans that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.178 serializeArray() [5/35]**

```
Cdr& serializeArray (
    const char * char_t,
    size_t numElements )
```

This function serializes an array of characters.

**Parameters**

<i>char_t</i>	The array of characters that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.179 serializeArray() [6/35]**

```
Cdr& serializeArray (
    const char * char_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of characters with a different endianness.

**Parameters**

<i>char_t</i>	The array of characters that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.180 serializeArray() [7/35]**

```
Cdr& serializeArray (
    const double * double_t,
    size_t numElements )
```

This function serializes an array of doubles.

## Parameters

<i>double_t</i>	The array of doubles that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.181 serializeArray() [8/35]**

```
Cdr& serializeArray (
    const double * double_t,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of doubles with a different endianness.

## Parameters

<i>double_t</i>	The array of doubles that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.182 serializeArray() [9/35]**

```
Cdr& serializeArray (
    const float * float_t,
    size_t numElements )
```

This function serializes an array of floats.

**Parameters**

<i>float_t</i>	The array of floats that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.183 serializeArray() [10/35]**

```
Cdr& serializeArray (
    const float * float_t,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of floats with a different endianness.

**Parameters**

<i>float_t</i>	The array of floats that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.184 serializeArray() [11/35]**

```
Cdr& serializeArray (
    const int16_t * short_t,
    size_t numElements )
```

This function serializes an array of shorts.

## Parameters

<i>short_t</i>	The array of shorts that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.185 serializeArray() [12/35]**

```
Cdr& serializeArray (
    const int16_t * short_t,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of shorts with a different endianness.

## Parameters

<i>short_t</i>	The array of shorts that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.186 serializeArray() [13/35]**

```
Cdr& serializeArray (
    const int32_t * long_t,
    size_t numElements )
```

This function serializes an array of longs.

**Parameters**

<i>long_t</i>	The array of longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.187 serializeArray() [14/35]**

```
Cdr& serializeArray (
    const int32_t * long_t,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of longs with a different endianness.

**Parameters**

<i>long_t</i>	The array of longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.188 serializeArray() [15/35]**

```
Cdr& serializeArray (
    const int64_t * longlong_t,
    size_t numElements )
```

This function serializes an array of long longs.

## Parameters

<i>longlong_t</i>	The array of long longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.189 serializeArray() [16/35]**

```
Cdr& serializeArray (
    const int64_t * longlong_t,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of long longs with a different endianness.

## Parameters

<i>longlong_t</i>	The array of long longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.190 serializeArray() [17/35]**

```
Cdr& serializeArray (
    const int8_t * int8,
    size_t numElements ) [inline]
```

This function serializes an array of int8\_t.

**Parameters**

<i>int8</i>	The sequence of int8_t that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.191 serializeArray() [18/35]**

```
Cdr& serializeArray (
    const int8_t * int8,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of int8\_t with a different endianness.

**Parameters**

<i>int8</i>	The array of int8_t that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.192 serializeArray() [19/35]**

```
Cdr& serializeArray (
    const long double * ldouble_t,
    size_t numElements )
```

This function serializes an array of long doubles.

## Parameters

<i>ldouble_t</i>	The array of long doubles that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.193 serializeArray() [20/35]**

```
Cdr& serializeArray (
    const long double * ldouble_t,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of long doubles with a different endianness.

## Parameters

<i>ldouble_t</i>	The array of long doubles that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.194 serializeArray() [21/35]**

```
Cdr& serializeArray (
    const std::string * string_t,
    size_t numElements ) [inline]
```

This function serializes an array of strings.

**Parameters**

<i>string_t</i>	The array of strings that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.195 serializeArray() [22/35]**

```
Cdr& serializeArray (
    const std::string * string_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of strings with a different endianness.

**Parameters**

<i>string_t</i>	The array of strings that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.196 serializeArray() [23/35]**

```
Cdr& serializeArray (
    const std::vector< _T > * vector_t,
    size_t numElements ) [inline]
```

This function template serializes an array of sequences of objects.

## Parameters

<i>vector_t</i>	The array of sequences of objects that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.197 serializeArray() [24/35]**

```
Cdr& serializeArray (
    const std::wstring * string_t,
    size_t numElements ) [inline]
```

This function serializes an array of wide-strings.

## Parameters

<i>string_t</i>	The array of wide-strings that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.198 serializeArray()** [25/35]

```
Cdr& serializeArray (
    const std::wstring * string_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of wide-strings with a different endianness.

## Parameters

<i>string_t</i>	The array of wide-strings that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.199 serializeArray()** [26/35]

```
Cdr& serializeArray (
    const uint16_t * ushort_t,
    size_t numElements ) [inline]
```

This function serializes an array of unsigned shorts.

## Parameters

<i>ushort_t</i>	The array of unsigned shorts that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.200 serializeArray() [27/35]**

```
Cdr& serializeArray (
    const uint16_t * ushort_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of unsigned shorts with a different endianness.

## Parameters

<i>ushort_t</i>	The array of unsigned shorts that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.201 serializeArray() [28/35]**

```
Cdr& serializeArray (
    const uint32_t * ulong_t,
    size_t numElements ) [inline]
```

This function serializes an array of unsigned longs.

## Parameters

<i>ulong_t</i>	The array of unsigned longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.202 serializeArray() [29/35]**

```
Cdr& serializeArray (
    const uint32_t * ulong_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of unsigned longs with a different endianness.

**Parameters**

<i>ulong_t</i>	The array of unsigned longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.203 serializeArray() [30/35]**

```
Cdr& serializeArray (
    const uint64_t * ulonglong_t,
    size_t numElements ) [inline]
```

This function serializes an array of unsigned long longs.

**Parameters**

<i>ulonglong_t</i>	The array of unsigned long longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.204 serializeArray() [31/35]**

```
Cdr& serializeArray (
    const uint64_t * ulonglong_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of unsigned long longs with a different endianness.

## Parameters

<i>ulonglong_t</i>	The array of unsigned long longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.205 serializeArray() [32/35]**

```
Cdr& serializeArray (
    const uint8_t * octet_t,
    size_t numElements ) [inline]
```

This function serializes an array of octets.

## Parameters

<i>octet_t</i>	The sequence of octets that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.206 serializeArray() [33/35]**

```
Cdr& serializeArray (
    const uint8_t * octet_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function serializes an array of octets with a different endianness.

## Parameters

<i>octet_t</i>	The array of octets that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.207 serializeArray() [34/35]**

```
Cdr& serializeArray (
    const wchar_t * wchar,
    size_t numElements )
```

This function serializes an array of wide-chars.

## Parameters

<i>wchar</i>	The array of wide-chars that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.208 serializeArray()** [35/35]

```
Cdr& serializeArray (
    const wchar_t * wchar,
    size_t numElements,
    Endianness endianness )
```

This function serializes an array of wide-chars with a different endianness.

## Parameters

<i>wchar</i>	The array of longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

## Returns

Reference to the [eprosima::fastcdr::Cdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.209 serializeSequence()** [1/2]

```
Cdr& serializeSequence (
    const _T * sequence_t,
    size_t numElements ) [inline]
```

This function template serializes a raw sequence.

## Parameters

<i>sequence_t</i>	Pointer to the sequence that will be serialized in the buffer.
<i>numElements</i>	The number of elements contained in the sequence.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.210 serializeSequence() [2/2]**

```
Cdr& serializeSequence (
    const _T * sequence_t,
    size_t numElements,
    Endianness endianness ) [inline]
```

This function template serializes a raw sequence with a different endianness.

**Parameters**

<i>sequence_t</i>	Pointer to the sequence that will be serialized in the buffer.
<i>numElements</i>	The number of elements contained in the sequence.
<i>endianness</i>	Endianness that will be used in the serialization of this value.

**Returns**

Reference to the [eprosima::fastcdr::Cdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize a position that exceeds the internal memory size.
---	---

**5.3.4.211 setDDSCdrOptions()**

```
void setDDSCdrOptions (
    uint16_t options )
```

This function sets the option flags when the CDR type is [eprosima::fastcdr::DDS\\_CDR](#).

**Parameters**

<i>options</i>	New value for the option flags.
----------------	---------------------------------

#### 5.3.4.212 setDDSCdrPlFlag()

```
void setDDSCdrPlFlag (
    DDSCdrPlFlag plFlag )
```

This function sets the parameter list flag when the CDR type is eprosima::fastcdr::DDS\_CDR.

##### Parameters

<i>plFlag</i>	New value for the flag that specifies if the content is a parameter list.
---------------	---

#### 5.3.4.213 setState()

```
void setState (
    state & state )
```

This function sets a previous state of the CDR serialization process;.

##### Parameters

<i>state</i>	Previous state that will be set.
--------------	----------------------------------

### 5.3.5 Member Data Documentation

#### 5.3.5.1 DEFAULT\_ENDIAN

```
const Endianness DEFAULT_ENDIAN [static]
```

Default endiness in the system.

The documentation for this class was generated from the following file:

- include/fastcdr/Cdr.h

## 5.4 Exception Class Reference

This abstract class is used to create exceptions.

```
#include <Exception.h>
```

Inheritance diagram for Exception:

### Public Member Functions

- virtual Cdr\_DllAPI [~Exception](#) () noexcept  
*Default destructor.*
- virtual Cdr\_DllAPI void [raise](#) () const =0  
*This function throws the object as exception.*
- virtual const Cdr\_DllAPI char \* [what](#) () const noexcept override  
*This function returns the error message.*

### Protected Member Functions

- Cdr\_DllAPI [Exception](#) (const char \*const &message) noexcept  
*Default constructor.*
- Cdr\_DllAPI [Exception](#) (const [Exception](#) &ex) noexcept  
*Default copy constructor.*
- Cdr\_DllAPI [Exception](#) & [operator=](#) (const [Exception](#) &ex) noexcept  
*Assignment operation.*

### 5.4.1 Detailed Description

This abstract class is used to create exceptions.

## 5.4.2 Constructor & Destructor Documentation

### 5.4.2.1 ~Exception()

```
virtual Cdr_DllAPI ~Exception ( ) [virtual], [noexcept]
```

Default destructor.

### 5.4.2.2 Exception() [1/2]

```
Cdr_DllAPI Exception (
    const char *const & message ) [protected], [noexcept]
```

Default constructor.

#### Parameters

<i>message</i>	A error message. This message pointer is copied.
----------------	--

### 5.4.2.3 Exception() [2/2]

```
Cdr_DllAPI Exception (
    const Exception & ex ) [protected], [noexcept]
```

Default copy constructor.

#### Parameters

<i>ex</i>	Exception that will be copied.
-----------	--------------------------------

## 5.4.3 Member Function Documentation

### 5.4.3.1 operator=()

```
Cdr_DllAPI Exception& operator= (
    const Exception & ex ) [protected], [noexcept]
```

Assignment operation.

#### Parameters

ex	<a href="#">Exception</a> that will be copied.
----	--

#### 5.4.3.2 raise()

```
virtual Cdr_DllAPI void raise ( ) const [pure virtual]
```

This function throws the object as exception.

Implemented in [NotEnoughMemoryException](#), and [BadParamException](#).

#### 5.4.3.3 what()

```
virtual const Cdr_DllAPI char* what ( ) const [override], [virtual], [noexcept]
```

This function returns the error message.

#### Returns

The error message.

The documentation for this class was generated from the following file:

- `include/fastcdr/exceptions/Exception.h`

## 5.5 FastBuffer Class Reference

This class represents a stream of bytes that contains (or will contain) serialized data.

```
#include <FastBuffer.h>
```

#### Public Types

- typedef [\\_FastBuffer\\_iterator](#) iterator

## Public Member Functions

- [FastBuffer](#) ()  
*This constructor creates an internal stream and assigns it to the `eprosima::fastcdr::FastBuffers` object.*
- [FastBuffer](#) (char \*const buffer, const size\_t bufferSize)  
*This constructor assigns the user's stream of bytes to the `eprosima::fastcdr::FastBuffers` object.*
- [FastBuffer](#) ([FastBuffer](#) &&fbuffer)  
*Move constructor.*
- [FastBuffer](#) & [operator=](#) ([FastBuffer](#) &&fbuffer)  
*Move assignment.*
- virtual [~FastBuffer](#) ()  
*Default destructor.*
- char \* [getBuffer](#) () const  
*This function returns the stream that the `eprosima::fastcdr::FastBuffers` uses to serialize data.*
- size\_t [getBufferSize](#) () const  
*This function returns the size of the allocated memory of the stream that the `eprosima::fastcdr::FastBuffers` uses to serialize data.*
- [iterator](#) [begin](#) ()  
*This function returns a iterator that points to the beginning of the stream.*
- [iterator](#) [end](#) ()  
*This function returns a iterator that points to the end of the stream.*
- bool [reserve](#) (size\_t size)  
*This function reserves memory for the internal raw buffer.*
- bool [resize](#) (size\_t minSizeInc)  
*This function resizes the raw buffer.*

### 5.5.1 Detailed Description

This class represents a stream of bytes that contains (or will contain) serialized data.

This class is used by the serializers to serialize or deserialize using their representation.

### 5.5.2 Member Typedef Documentation

#### 5.5.2.1 iterator

```
typedef _FastBuffer_iterator iterator
```

### 5.5.3 Constructor & Destructor Documentation

**5.5.3.1 FastBuffer() [1/3]**

```
FastBuffer ( )
```

This constructor creates an internal stream and assigns it to the `eprosima::fastcdr::FastBuffers` object.

The user can obtain this internal stream using the function `eprosima::fastcdr::FastBuffers::getBuffer()`. Be careful because this internal stream is deleted in the destruction of the `eprosima::fastcdr::FastBuffers` object.

**5.5.3.2 FastBuffer() [2/3]**

```
FastBuffer (
    char *const buffer,
    const size_t bufferSize )
```

This constructor assigns the user's stream of bytes to the `eprosima::fastcdr::FastBuffers` object.

The user's stream will be used to serialize.

**Parameters**

<i>buffer</i>	The user's buffer that will be used. This buffer is not deallocated in the object's destruction. Cannot be NULL.
<i>bufferSize</i>	The length of user's buffer.

**5.5.3.3 FastBuffer() [3/3]**

```
FastBuffer (
    FastBuffer && fbuffer ) [inline]
```

Move constructor.

**5.5.3.4 ~FastBuffer()**

```
virtual ~FastBuffer ( ) [virtual]
```

Default destructor.

**5.5.4 Member Function Documentation**

#### 5.5.4.1 begin()

```
iterator begin ( ) [inline]
```

This function returns a iterator that points to the begining of the stream.

##### Returns

The new iterator.

#### 5.5.4.2 end()

```
iterator end ( ) [inline]
```

This function returns a iterator that points to the end of the stream.

##### Returns

The new iterator.

#### 5.5.4.3 getBuffer()

```
char* getBuffer ( ) const [inline]
```

This function returns the stream that the eprosima::fastcdr::FastBuffers uses to serialize data.

##### Returns

The stream used by eprosima::fastcdr::FastBuffers to serialize data.

#### 5.5.4.4 getBufferSize()

```
size_t getBufferSize ( ) const [inline]
```

This function returns the size of the allocated memory of the stream that the eprosima::fastcdr::FastBuffers uses to serialize data.

##### Returns

The size of the allocated memory of the stream used by the eprosima::fastcdr::FastBuffers to serialize data.

#### 5.5.4.5 operator=()

```
FastBuffer& operator= (
    FastBuffer && fbuffer ) [inline]
```

Move assignment.

#### 5.5.4.6 reserve()

```
bool reserve (
    size_t size )
```

This function reserves memory for the internal raw buffer.

It will only do so if the buffer is not yet allocated and is not externally set.

## Parameters

<i>size</i>	The size of the memory to be allocated.
-------------	---

## Returns

True if the allocation succeeded. False if the raw buffer was set externally or is already allocated.

**5.5.4.7 `resize()`**

```
bool resize (
    size_t minSizeInc )
```

This function resizes the raw buffer.

It will call the user's defined function for this purpose.

## Parameters

<i>minSizeInc</i>	The minimum growth expected of the current raw buffer.
-------------------	--

## Returns

True if the operation works. False if it does not.

The documentation for this class was generated from the following file:

- include/fastcdr/FastBuffer.h

**5.6 FastCdr Class Reference**

This class offers an interface to serialize/deserialize some basic types using a modified CDR protocol inside a `eprosima::FastBuffer`.

```
#include <FastCdr.h>
```

**Classes**

- class [state](#)

*This class stores the current state of a CDR serialization.*

## Public Member Functions

- [FastCdr](#) ([FastBuffer](#) &cdrBuffer)
 

*This constructor creates a [eprosima::fastcdr::FastCdr](#) object that can serialize/deserialize the assigned buffer.*
- bool [jump](#) (size\_t numBytes)
 

*This function skips a number of bytes in the CDR stream buffer.*
- void [reset](#) ()
 

*This function resets the current position in the buffer to the beginning.*
- char \* [getCurrentPosition](#) ()
 

*This function returns the current position in the CDR stream.*
- size\_t [getSerializedDataLength](#) () const
 

*This function returns the length of the serialized data inside the stream.*
- [FastCdr::state](#) [getState](#) ()
 

*This function returns the current state of the CDR stream.*
- void [setState](#) ([FastCdr::state](#) &state)
 

*This function sets a previous state of the CDR stream;.*
- [FastCdr](#) & [operator<<](#) (const uint8\_t octet\_t)
 

*This operator serializes an octet.*

### 5.6.1 Detailed Description

This class offers an interface to serialize/deserialize some basic types using a modified CDR protocol inside a `eprosima::FastBuffer`.

This modified CDR protocol provides a serialization mechanism much faster than common CDR protocol, because it doesn't use alignment.

### 5.6.2 Constructor & Destructor Documentation

#### 5.6.2.1 FastCdr()

```
FastCdr (
    FastBuffer & cdrBuffer )
```

This constructor creates a [eprosima::fastcdr::FastCdr](#) object that can serialize/deserialize the assigned buffer.

#### Parameters

<code>cdrBuffer</code>	A reference to the buffer that contains (or will contain) the CDR representation.
------------------------	---

### 5.6.3 Member Function Documentation

#### 5.6.3.1 deserialize() [1/20]

```
FastCdr& deserialize (
    _T & type_t ) [inline]
```

This function template deserializes a non-basic type object.

## Parameters

<i>type</i> ↔ <i>_t</i>	The variable that will store the object read from the buffer.
----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.2 deserialize()** [2/20]

```
FastCdr& deserialize (
    bool & bool_t )
```

This function deserializes a boolean.

## Parameters

<i>bool</i> ↔ <i>_t</i>	The variable that will store the boolean read from the buffer.
----------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
<a href="#">exception::BadParamException</a>	This exception is thrown when trying to deserialize in an invalid value.

**5.6.3.3 deserialize()** [3/20]

```
FastCdr& deserialize (
    char & char_t ) [inline]
```

This function deserializes a character.

## Parameters

<i>char</i> ↔ _t	The variable that will store the character read from the buffer.
---------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.4 deserialize()** [4/20]

```
FastCdr& deserialize (
    char *& string_t )
```

This function deserializes a string.

This function allocates memory to store the string. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using free()

## Parameters

<i>string</i> ↔ _t	The pointer that will point to the string read from the buffer. The user will have to free the allocated memory using free()
-----------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.5 deserialize()** [5/20]

```
FastCdr& deserialize (
    double & double_t ) [inline]
```

This function deserializes a double.

## Parameters

<i>double</i> ↔ _t	The variable that will store the double read from the buffer.
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.6 deserialize()** [6/20]

```
FastCdr& deserialize (
    float & float_t ) [inline]
```

This function deserializes a float.

## Parameters

<i>float</i> ↔ _t	The variable that will store the float read from the buffer.
----------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.7 deserialize()** [7/20]

```
FastCdr& deserialize (
    int16_t & short_t ) [inline]
```

This function deserializes a short.

## Parameters

<code>short↵ _t</code>	The variable that will store the short read from the buffer.
----------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.8 deserialize()** [8/20]

```
FastCdr& deserialize (
    int32_t & long_t ) [inline]
```

This function deserializes a long.

## Parameters

<code>long↵ _t</code>	The variable that will store the long read from the buffer.
---------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.9 deserialize()** [9/20]

```
FastCdr& deserialize (
    int64_t & longlong_t ) [inline]
```

This function deserializes a long long.

## Parameters

<code>longlong↔ _t</code>	The variable that will store the long long read from the buffer.
-------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.10 deserialize()** [10/20]

```
FastCdr& deserialize (
    int8_t & int8 ) [inline]
```

This function deserializes an int8\_t.

## Parameters

<code>int8</code>	The variable that will store the int8_t read from the buffer.
-------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.11 deserialize()** [11/20]

```
FastCdr& deserialize (
    long double & ldouble_t ) [inline]
```

This function deserializes a long double.

## Parameters

<i>ldouble</i> ↔ _t	The variable that will store the long double read from the buffer.
------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.12 deserialize()** [12/20]

```
FastCdr& deserialize (
    std::string & string_t ) [inline]
```

This function deserializes a std::string.

## Parameters

<i>string</i> ↔ _t	The variable that will store the string read from the buffer.
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.13 deserialize()** [13/20]

```
FastCdr& deserialize (
    std::vector< _T > & vector_t ) [inline]
```

This function template deserializes a sequence.

## Parameters

<code>vector&lt; _t</code>	The variable that will store the sequence read from the buffer.
--------------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.14 deserialize()** [14/20]

```
FastCdr& deserialize (
    std::wstring & string_t ) [inline]
```

This function deserializes a std::wstring.

## Parameters

<code>string&lt; _t</code>	The variable that will store the wstring read from the buffer.
--------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.15 deserialize()** [15/20]

```
FastCdr& deserialize (
    uint16_t & ushort_t ) [inline]
```

This function deserializes an unsigned short.

## Parameters

<code>ushort↔ _t</code>	The variable that will store the unsigned short read from the buffer.
-----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.16 deserialize()** [16/20]

```
FastCdr& deserialize (
    uint32_t & ulong_t ) [inline]
```

This function deserializes an unsigned long.

## Parameters

<code>ulong↔ _t</code>	The variable that will store the unsigned long read from the buffer.
----------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.17 deserialize()** [17/20]

```
FastCdr& deserialize (
    uint64_t & ulonglong_t ) [inline]
```

This function deserializes an unsigned long long.

## Parameters

<i>ulonglong</i> ↔ _t	The variable that will store the unsigned long long read from the buffer.
--------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.18 deserialize()** [18/20]

```
FastCdr& deserialize (
    uint8_t & octet_t ) [inline]
```

This function deserializes an octet.

## Parameters

<i>octet</i> ↔ _t	The variable that will store the octet read from the buffer.
----------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.19 deserialize()** [19/20]

```
FastCdr& deserialize (
    wchar_t & wchar ) [inline]
```

This function deserializes a wide-char.

## Parameters

<i>wchar</i>	The variable that will store the wide-char read from the buffer.
--------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.20 deserialize()** [20/20]

```
FastCdr& deserialize (
    wchar_t *& string_t )
```

This function deserializes a wide string.

This function allocates memory to store the wide string. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using free()

## Parameters

<i>string</i> ↔ _t	The pointer that will point to the wide string read from the buffer. The user will have to free the allocated memory using free()
-----------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.21 deserializeArray()** [1/18]

```
FastCdr& deserializeArray (
    _T * type_t,
    size_t numElements ) [inline]
```

This function template deserializes an array of non-basic type objects.

## Parameters

<i>type_t</i>	The variable that will store the array of objects read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.22 deserializeArray()** [2/18]

```
FastCdr& deserializeArray (
    bool * bool_t,
    size_t numElements )
```

This function deserializes an array of booleans.

## Parameters

<i>bool_t</i>	The variable that will store the array of booleans read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.23 deserializeArray()** [3/18]

```
FastCdr& deserializeArray (
    char * char_t,
    size_t numElements )
```

This function deserializes an array of characters.

## Parameters

<i>char_t</i>	The variable that will store the array of characters read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.24 deserializeArray() [4/18]**

```
FastCdr& deserializeArray (
    double * double_t,
    size_t numElements )
```

This function deserializes an array of doubles.

## Parameters

<i>double_t</i>	The variable that will store the array of doubles read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.25 deserializeArray() [5/18]**

```
FastCdr& deserializeArray (
    float * float_t,
    size_t numElements )
```

This function deserializes an array of floats.

## Parameters

<i>float_t</i>	The variable that will store the array of floats read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.26 deserializeArray()** [6/18]

```
FastCdr& deserializeArray (
    int16_t * short_t,
    size_t numElements )
```

This function deserializes an array of shorts.

## Parameters

<i>short_t</i>	The variable that will store the array of shorts read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.27 deserializeArray()** [7/18]

```
FastCdr& deserializeArray (
    int32_t * long_t,
    size_t numElements )
```

This function deserializes an array of longs.

## Parameters

<i>long_t</i>	The variable that will store the array of longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.28 deserializeArray() [8/18]**

```
FastCdr& deserializeArray (
    int64_t * longlong_t,
    size_t numElements )
```

This function deserializes an array of long longs.

## Parameters

<i>longlong_t</i>	The variable that will store the array of long longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.29 deserializeArray() [9/18]**

```
FastCdr& deserializeArray (
    int8_t * int8,
    size_t numElements ) [inline]
```

This function deserializes an array of int8\_t.

## Parameters

<i>int8</i>	The variable that will store the array of <code>int8_t</code> read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.30 deserializeArray()** [10/18]

```
FastCdr& deserializeArray (
    long double * ldouble_t,
    size_t numElements )
```

This function deserializes an array of long doubles.

## Parameters

<i>ldouble_t</i>	The variable that will store the array of long doubles read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.31 deserializeArray()** [11/18]

```
FastCdr& deserializeArray (
    std::string * string_t,
    size_t numElements ) [inline]
```

This function deserializes an array of strings.

## Parameters

<i>string_t</i>	The variable that will store the array of strings read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.32 deserializeArray()** [12/18]

```
FastCdr& deserializeArray (
    std::vector< _T > * vector_t,
    size_t numElements ) [inline]
```

This function template deserializes an array of sequences.

## Parameters

<i>vector_t</i>	The variable that will store the array of sequences read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.33 deserializeArray()** [13/18]

```
FastCdr& deserializeArray (
    std::wstring * string_t,
    size_t numElements ) [inline]
```

This function deserializes an array of wide-strings.

## Parameters

<i>string_t</i>	The variable that will store the array of strings read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.34 deserializeArray()** [14/18]

```
FastCdr& deserializeArray (
    uint16_t * ushort_t,
    size_t numElements ) [inline]
```

This function deserializes an array of unsigned shorts.

## Parameters

<i>ushort_t</i>	The variable that will store the array of unsigned shorts read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.35 deserializeArray()** [15/18]

```
FastCdr& deserializeArray (
    uint32_t * ulong_t,
    size_t numElements ) [inline]
```

This function deserializes an array of unsigned longs.

## Parameters

<i>ulong_t</i>	The variable that will store the array of unsigned longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.36 deserializeArray()** [16/18]

```
FastCdr& deserializeArray (
    uint64_t * ulonglong_t,
    size_t numElements ) [inline]
```

This function deserializes an array of unsigned long longs.

## Parameters

<i>ulonglong_t</i>	The variable that will store the array of unsigned long longs read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.37 deserializeArray()** [17/18]

```
FastCdr& deserializeArray (
    uint8_t * octet_t,
    size_t numElements ) [inline]
```

This function deserializes an array of octets.

## Parameters

<i>octet_t</i>	The variable that will store the array of octets read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.38 deserializeArray()** [18/18]

```
FastCdr& deserializeArray (
    wchar_t * wchar,
    size_t numElements )
```

This function deserializes an array of wide-chars.

## Parameters

<i>wchar</i>	The variable that will store the array of wide-chars read from the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.39 deserializeSequence()**

```
FastCdr& deserializeSequence (
    _T *& sequence_t,
    size_t & numElements ) [inline]
```

This function template deserializes a raw sequence.

This function allocates memory to store the sequence. The user pointer will be set to point this allocated memory. The user will have to free this allocated memory using `free()`

## Parameters

<i>sequence_t</i>	The pointer that will store the sequence read from the buffer.
<i>numElements</i>	This variable return the number of elements of the sequence.

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
---	--

**5.6.3.40 getCurrentPosition()**

```
char* getCurrentPosition ( )
```

This function returns the current position in the CDR stream.

## Returns

Pointer to the current position in the buffer.

**5.6.3.41 getSerializedDataLength()**

```
size_t getSerializedDataLength ( ) const [inline]
```

This function returns the length of the serialized data inside the stream.

## Returns

The length of the serialized data.

**5.6.3.42 getState()**

```
FastCdr::state getState ( )
```

This function returns the current state of the CDR stream.

## Returns

The current state of the buffer.

**5.6.3.43 jump()**

```
bool jump (
    size_t numBytes )
```

This function skips a number of bytes in the CDR stream buffer.

## Parameters

<i>numBytes</i>	The number of bytes that will be jumped.
-----------------	--

## Returns

True is returned when the jump operation works successfully. Otherwise, false is returned.

5.6.3.44 `operator<<()` [1/20]

```
FastCdr& operator<< (
    const _T & type_t ) [inline]
```

This operator template is used to serialize non-basic types.

## Parameters

<i>type</i> ↔ <i>_t</i>	The object that will be serialized in the buffer.
----------------------------	---

## Returns

Reference to the `eprosima::fastcdr::FastCdr` object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

5.6.3.45 `operator<<()` [2/20]

```
FastCdr& operator<< (
    const bool bool_t ) [inline]
```

This operator serializes a boolean.

## Parameters

<i>bool</i> ↔ <i>_t</i>	The value of the boolean that will be serialized in the buffer.
----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.46 operator<<() [3/20]**

```
FastCdr& operator<< (
    const char * string_t ) [inline]
```

This operator serializes a null-terminated string.

## Parameters

<a href="#">string_t</a>	The value of the string that will be serialized in the buffer.
--------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.47 operator<<() [4/20]**

```
FastCdr& operator<< (
    const char char_t ) [inline]
```

This operator serializes a character.

## Parameters

<a href="#">char_t</a>	The value of the character that will be serialized in the buffer.
------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.48 operator<<() [5/20]**

```
FastCdr& operator<< (
    const double double_t ) [inline]
```

This operator serializes a ldouble.

## Parameters

<i>double</i> ↔ _t	The value of the double that will be serialized in the buffer.
-----------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.49 operator<<() [6/20]**

```
FastCdr& operator<< (
    const float float_t ) [inline]
```

This operator serializes a float.

## Parameters

<i>float</i> ↔ _t	The value of the float that will be serialized in the buffer.
----------------------	---

**Returns**

Reference to the [eprosima::fastcdr::FastCdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.50 operator<<() [7/20]**

```
FastCdr& operator<< (
    const int16_t short_t ) [inline]
```

This operator serializes a short.

**Parameters**

<a href="#"><i>short_t</i></a>	The value of the short that will be serialized in the buffer.
--------------------------------	---

**Returns**

Reference to the [eprosima::fastcdr::FastCdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.51 operator<<() [8/20]**

```
FastCdr& operator<< (
    const int32_t long_t ) [inline]
```

This operator serializes a long.

**Parameters**

<a href="#"><i>long_t</i></a>	The value of the long that will be serialized in the buffer.
-------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

## 5.6.3.52 operator&lt;&lt;() [9/20]

```
FastCdr& operator<< (
    const int64_t longlong_t ) [inline]
```

This operator serializes a long long.

## Parameters

<i>longlong</i> <sub>↔</sub> <i>_t</i>	The value of the long long that will be serialized in the buffer.
---	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

## 5.6.3.53 operator&lt;&lt;() [10/20]

```
FastCdr& operator<< (
    const int8_t int8 ) [inline]
```

This operator serializes a int8\_t.

## Parameters

<i>int8</i>	The value of the int8_t that will be serialized in the buffer.
-------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.54 operator<<() [11/20]**

```
FastCdr& operator<< (
    const long double ldouble_t ) [inline]
```

This operator serializes a long double.

## Parameters

<i>ldouble_t</i>	The value of the long double that will be serialized in the buffer.
------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.55 operator<<() [12/20]**

```
FastCdr& operator<< (
    const std::string & string_t ) [inline]
```

This operator serializes a string.

## Parameters

<i>string_t</i>	The string that will be serialized in the buffer.
-----------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

## 5.6.3.56 operator&lt;&lt;() [13/20]

```
FastCdr& operator<< (
    const std::vector< _T > & vector_t ) [inline]
```

This operator template is used to serialize sequences.

## Parameters

<i>vector</i> ↔ _t	The sequence that will be serialized in the buffer.
-----------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

## 5.6.3.57 operator&lt;&lt;() [14/20]

```
FastCdr& operator<< (
    const std::wstring & string_t ) [inline]
```

This operator serializes a wstring.

## Parameters

<i>string</i> ↔ _t	The wstring that will be serialized in the buffer.
-----------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.58 operator<<()** [15/20]

```
FastCdr& operator<< (
    const uint16_t ushort_t ) [inline]
```

This operator serializes an unsigned short.

## Parameters

<i>ushort_t</i>	The value of the unsigned short that will be serialized in the buffer.
-----------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.59 operator<<()** [16/20]

```
FastCdr& operator<< (
    const uint32_t ulong_t ) [inline]
```

This operator serializes an unsigned long.

## Parameters

<i>ulong_t</i>	The value of the unsigned long that will be serialized in the buffer.
----------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.60 operator<<()** [17/20]

```
FastCdr& operator<< (
    const uint64_t ulonglong_t ) [inline]
```

This operator serializes an unsigned long long.

## Parameters

<a href="#"><i>ulonglong_t</i></a>	The value of the unsigned long long that will be serialized in the buffer.
------------------------------------	--

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.61 operator<<()** [18/20]

```
FastCdr& operator<< (
    const uint8_t octet_t ) [inline]
```

This operator serializes an octet.

## Parameters

<a href="#"><i>octet_t</i></a>	The value of the octet that will be serialized in the buffer.
--------------------------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.62 operator<<()** [19/20]

```
FastCdr& operator<< (
    const wchar_t * string_t ) [inline]
```

This operator serializes a null-terminated wide-string.

## Parameters

<i>string</i> <sub><i>_t</i></sub>	The value of the wide-string that will be serialized in the buffer.
---------------------------------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.63 operator<<()** [20/20]

```
FastCdr& operator<< (
    const wchar_t wchar ) [inline]
```

This operator serializes a wide-char.

## Parameters

<i>wchar</i>	The value of the wide-char that will be serialized in the buffer.
--------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.64 operator>>() [1/19]**

```
FastCdr& operator>> (
    _T & type_t ) [inline]
```

This operator template is used to deserialize non-basic types.

## Parameters

<i>type</i> ↔ _t	The variable that will store the object read from the buffer.
---------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.65 operator>>() [2/19]**

```
FastCdr& operator>> (
    bool & bool_t ) [inline]
```

This operator deserializes a boolean.

## Parameters

<i>bool</i> ↔ _t	The variable that will store the boolean read from the buffer.
---------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
<a href="#"><i>exception::BadParamException</i></a>	This exception is thrown when trying to deserialize in an invalid value.

**5.6.3.66 operator>>() [3/19]**

```
FastCdr& operator>> (
    char & char_t ) [inline]
```

This operator deserializes a character.

## Parameters

<i>char</i> ↔ <i>_t</i>	The variable that will store the character read from the buffer.
----------------------------	--

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.67 operator>>() [4/19]**

```
FastCdr& operator>> (
    char *& string_t ) [inline]
```

This operator deserializes a null-terminated c-string.

## Parameters

<i>string</i> ↔ <i>_t</i>	The variable that will store the c-string read from the buffer. Please note that a newly allocated string will be returned. The caller should free the returned pointer when appropriate.
------------------------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize a position that exceeds the internal memory size.
<a href="#"><i>exception::BadParamException</i></a>	This exception is thrown when trying to deserialize an invalid value.

**5.6.3.68 operator>>()** [5/19]

```
FastCdr& operator>> (
    double & double_t ) [inline]
```

This operator deserializes a double.

## Parameters

<i>double</i> ↔ <i>_t</i>	The variable that will store the double read from the buffer.
------------------------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.69 operator>>()** [6/19]

```
FastCdr& operator>> (
    float & float_t ) [inline]
```

This operator deserializes a float.

## Parameters

<i>float</i> ↔ <i>_t</i>	The variable that will store the float read from the buffer.
-----------------------------	--

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.70 operator>>() [7/19]**

```
FastCdr& operator>> (
    int16_t & short_t ) [inline]
```

This operator deserializes a short.

## Parameters

<i>short_t</i>	The variable that will store the short read from the buffer.
----------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.71 operator>>() [8/19]**

```
FastCdr& operator>> (
    int32_t & long_t ) [inline]
```

This operator deserializes a long.

## Parameters

<i>long_t</i>	The variable that will store the long read from the buffer.
---------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

## 5.6.3.72 operator&gt;&gt;() [9/19]

```
FastCdr& operator>> (
    int64_t & longlong_t ) [inline]
```

This operator deserializes a long long.

## Parameters

<i>longlong</i> ↔ _t	The variable that will store the long long read from the buffer.
-------------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

## 5.6.3.73 operator&gt;&gt;() [10/19]

```
FastCdr& operator>> (
    int8_t & int8 ) [inline]
```

This operator deserializes an int8\_t.

## Parameters

<i>int8</i>	The variable that will store the int8_t read from the buffer.
-------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.74 operator>>() [11/19]**

```
FastCdr& operator>> (
    long double & ldouble_t ) [inline]
```

This operator deserializes a long double.

## Parameters

<i>ldouble</i> ↔ _t	The variable that will store the long double read from the buffer.
------------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.75 operator>>() [12/19]**

```
FastCdr& operator>> (
    std::string & string_t ) [inline]
```

This operator deserializes a string.

## Parameters

<i>string</i> ↔ _t	The variable that will store the string read from the buffer.
-----------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.76 operator>>() [13/19]**

```
FastCdr& operator>> (
    std::vector< _T > & vector_t ) [inline]
```

This operator template is used to deserialize sequences.

## Parameters

<i>vector</i> ↔ _t	The variable that will store the sequence read from the buffer.
-----------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.77 operator>>() [14/19]**

```
FastCdr& operator>> (
    std::wstring & string_t ) [inline]
```

This operator deserializes a wstring.

## Parameters

<i>string</i> ↔ _t	The variable that will store the wstring read from the buffer.
-----------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.78 operator>>() [15/19]**

```
FastCdr& operator>> (
    uint16_t & ushort_t ) [inline]
```

This operator deserializes an unsigned short.

## Parameters

<i>ushort_t</i>	The variable that will store the unsigned short read from the buffer.
-----------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.79 operator>>() [16/19]**

```
FastCdr& operator>> (
    uint32_t & ulong_t ) [inline]
```

This operator deserializes an unsigned long.

## Parameters

<i>ulong_t</i>	The variable that will store the unsigned long read from the buffer.
----------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.80 operator>>() [17/19]**

```
FastCdr& operator>> (
    uint64_t & ulonglong_t ) [inline]
```

This operator deserializes an unsigned long long.

## Parameters

<i>ulonglong_t</i>	The variable that will store the unsigned long long read from the buffer.
--------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.81 operator>>() [18/19]**

```
FastCdr& operator>> (
    uint8_t & octet_t ) [inline]
```

This operator deserializes an octet.

## Parameters

<i>octet_t</i>	The variable that will store the octet read from the buffer.
----------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.82 operator>>() [19/19]**

```
FastCdr& operator>> (
    wchar_t & wchar ) [inline]
```

This operator deserializes a wide-char.

## Parameters

<i>wchar</i>	The variable that will store the wide-char read from the buffer.
--------------	--

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to deserialize in a position that exceeds the internal memory size.
--	--

**5.6.3.83 reset()**

```
void reset ( )
```

This function resets the current position in the buffer to the begining.

**5.6.3.84 serialize() [1/20]**

```
FastCdr& serialize (
    const _T & type_t ) [inline]
```

This function template serializes a non-basic type.

## Parameters

<i>type</i> ↔ <i>_t</i>	The object that will be serialized in the buffer.
----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.85 serialize()** [2/20]

```
FastCdr& serialize (
    const bool bool_t )
```

This function serializes a boolean.

## Parameters

<a href="#">bool_t</a>	The value of the boolean that will be serialized in the buffer.
------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.86 serialize()** [3/20]

```
FastCdr& serialize (
    const char * string_t )
```

This function serializes a string.

## Parameters

<a href="#">string_t</a>	The pointer to the string that will be serialized in the buffer.
--------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.87 serialize()** [4/20]

```
FastCdr& serialize (
    const char char_t ) [inline]
```

This function serializes a character.

## Parameters

<i>char</i> ↔ <i>_t</i>	The value of the character that will be serialized in the buffer.
----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.88 serialize()** [5/20]

```
FastCdr& serialize (
    const double double_t ) [inline]
```

This function serializes a double.

## Parameters

<i>double</i> ↔ <i>_t</i>	The value of the double that will be serialized in the buffer.
------------------------------	--

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.89 serialize()** [6/20]

```
FastCdr& serialize (
    const float float_t ) [inline]
```

This function serializes a float.

## Parameters

<i>float</i> ↔ _t	The value of the float that will be serialized in the buffer.
----------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.90 serialize()** [7/20]

```
FastCdr& serialize (
    const int16_t short_t ) [inline]
```

This function serializes a short.

## Parameters

<i>short</i> ↔ _t	The value of the short that will be serialized in the buffer.
----------------------	---

**Returns**

Reference to the [eprosima::fastcdr::FastCdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.91 serialize() [8/20]**

```
FastCdr& serialize (
    const int32_t long_t ) [inline]
```

This function serializes a long.

**Parameters**

<a href="#">long_t</a>	The value of the long that will be serialized in the buffer.
------------------------	--

**Returns**

Reference to the [eprosima::fastcdr::FastCdr](#) object.

**Exceptions**

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.92 serialize() [9/20]**

```
FastCdr& serialize (
    const int64_t longlong_t ) [inline]
```

This function serializes a long long.

**Parameters**

<a href="#">longlong_t</a>	The value of the long long that will be serialized in the buffer.
----------------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.93 serialize()** [10/20]

```
FastCdr& serialize (
    const int8_t int8 ) [inline]
```

This function serializes an `int8_t`.

## Parameters

<i>int8</i>	The value of the <code>int8_t</code> that will be serialized in the buffer.
-------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#">exception::NotEnoughMemoryException</a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
---	--

**5.6.3.94 serialize()** [11/20]

```
FastCdr& serialize (
    const long double ldouble_t ) [inline]
```

This function serializes a long double.

## Parameters

<i>ldouble_t</i>	The value of the long double that will be serialized in the buffer.
------------------	---

## Returns

Reference to the [eprosima::fastcdr::FastCdr](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.95 serialize()** [12/20]

```
FastCdr& serialize (
    const std::string & string_t ) [inline]
```

This function serializes a std::string.

## Parameters

<i>string</i> ↔ _t	The string that will be serialized in the buffer.
-----------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.96 serialize()** [13/20]

```
FastCdr& serialize (
    const std::vector< _T > & vector_t ) [inline]
```

This function template serializes a sequence.

## Parameters

<i>vector</i> ↔ _t	The sequence that will be serialized in the buffer.
-----------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.97 serialize()** [14/20]

```
FastCdr& serialize (
    const std::wstring & string_t ) [inline]
```

This function serializes a std::wstring.

## Parameters

<i>string</i> _t	The wstring that will be serialized in the buffer.
---------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.98 serialize()** [15/20]

```
FastCdr& serialize (
    const uint16_t ushort_t ) [inline]
```

This function serializes an unsigned short.

## Parameters

<i>ushort</i> _t	The value of the unsigned short that will be serialized in the buffer.
---------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.99 serialize()** [16/20]

```
FastCdr& serialize (
    const uint32_t ulong_t ) [inline]
```

This function serializes an unsigned long.

## Parameters

<i>ulong</i> <i>_t</i>	The value of the unsigned long that will be serialized in the buffer.
---------------------------	---

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.100 serialize()** [17/20]

```
FastCdr& serialize (
    const uint64_t ulonglong_t ) [inline]
```

This function serializes an unsigned long long.

## Parameters

<i>ulonglong</i> <i>_t</i>	The value of the unsigned long long that will be serialized in the buffer.
-------------------------------	--

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.101 serialize()** [18/20]

```
FastCdr& serialize (
    const uint8_t octet_t ) [inline]
```

This function serializes an octet.

## Parameters

<i>octet_t</i>	The value of the octet that will be serialized in the buffer.
----------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.102 serialize()** [19/20]

```
FastCdr& serialize (
    const wchar_t * string_t )
```

This function serializes a wstring.

## Parameters

<i>string_t</i>	The pointer to the wstring that will be serialized in the buffer.
-----------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.103 serialize()** [20/20]

```
FastCdr& serialize (
    const wchar_t wchar ) [inline]
```

This function serializes a wide-char.

## Parameters

<i>wchar</i>	The value of the wide-char that will be serialized in the buffer.
--------------	---

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.104 serializeArray()** [1/18]

```
FastCdr& serializeArray (
    const _T * type_t,
    size_t numElements ) [inline]
```

This function template serializes an array of non-basic type objects.

## Parameters

<i>type_t</i>	The array of objects that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.105 serializeArray()** [2/18]

```
FastCdr& serializeArray (
    const bool * bool_t,
    size_t numElements )
```

This function serializes an array of booleans.

## Parameters

<i>bool_t</i>	The array of booleans that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.106 serializeArray()** [3/18]

```
FastCdr& serializeArray (
    const char * char_t,
    size_t numElements )
```

This function serializes an array of characters.

## Parameters

<i>char_t</i>	The array of characters that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.107 serializeArray()** [4/18]

```
FastCdr& serializeArray (
    const double * double_t,
    size_t numElements )
```

This function serializes an array of doubles.

## Parameters

<i>double_t</i>	The array of doubles that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.108 serializeArray()** [5/18]

```
FastCdr& serializeArray (
    const float * float_t,
    size_t numElements )
```

This function serializes an array of floats.

## Parameters

<i>float_t</i>	The array of floats that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.109 serializeArray() [6/18]**

```
FastCdr& serializeArray (
    const int16_t * short_t,
    size_t numElements )
```

This function serializes an array of shorts.

## Parameters

<i>short_t</i>	The array of shorts that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.110 serializeArray() [7/18]**

```
FastCdr& serializeArray (
    const int32_t * long_t,
    size_t numElements )
```

This function serializes an array of longs.

## Parameters

<i>long_t</i>	The array of longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.111 serializeArray() [8/18]**

```
FastCdr& serializeArray (
    const int64_t * longlong_t,
    size_t numElements )
```

This function serializes an array of long longs.

## Parameters

<i>longlong_t</i>	The array of long longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.112 serializeArray() [9/18]**

```
FastCdr& serializeArray (
    const int8_t * int8,
    size_t numElements ) [inline]
```

This function serializes an array of int8\_t.

## Parameters

<i>int8</i>	The sequence of int8_t that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.113 `serializeArray()`** [10/18]

```
FastCdr& serializeArray (
    const long double * ldouble_t,
    size_t numElements )
```

This function serializes an array of long doubles.

## Parameters

<i>ldouble_t</i>	The array of long doubles that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.114 `serializeArray()`** [11/18]

```
FastCdr& serializeArray (
    const std::string * string_t,
    size_t numElements ) [inline]
```

This function serializes an array of strings.

## Parameters

<i>string_t</i>	The array of strings that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.115 serializeArray()** [12/18]

```
FastCdr& serializeArray (
    const std::vector< _T > * vector_t,
    size_t numElements ) [inline]
```

This function template serializes an array of sequences.

## Parameters

<i>vector_t</i>	The array of sequences that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.116 serializeArray()** [13/18]

```
FastCdr& serializeArray (
    const std::wstring * string_t,
    size_t numElements ) [inline]
```

This function serializes an array of wstrings.

## Parameters

<i>string_t</i>	The array of wstrings that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.117 serializeArray() [14/18]**

```
FastCdr& serializeArray (
    const uint16_t * ushort_t,
    size_t numElements ) [inline]
```

This function serializes an array of unsigned shorts.

## Parameters

<i>ushort_t</i>	The array of unsigned shorts that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.118 serializeArray() [15/18]**

```
FastCdr& serializeArray (
    const uint32_t * ulong_t,
    size_t numElements ) [inline]
```

This function serializes an array of unsigned longs.

## Parameters

<i>ulong_t</i>	The array of unsigned longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.119 serializeArray() [16/18]**

```
FastCdr& serializeArray (
    const uint64_t * ulonglong_t,
    size_t numElements ) [inline]
```

This function serializes an array of unsigned long longs.

## Parameters

<i>ulonglong_t</i>	The array of unsigned long longs that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.120 serializeArray() [17/18]**

```
FastCdr& serializeArray (
    const uint8_t * octet_t,
    size_t numElements ) [inline]
```

This function serializes an array of octets.

## Parameters

<i>octet_t</i>	The sequence of octets that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [\*eprosima::fastcdr::FastCdr\*](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.121 serializeArray()** [18/18]

```
FastCdr& serializeArray (
    const wchar_t * wchar,
    size_t numElements )
```

This function serializes an array of wide-chars.

## Parameters

<i>wchar</i>	The array of wide-chars that will be serialized in the buffer.
<i>numElements</i>	Number of the elements in the array.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><code>exception::NotEnoughMemoryException</code></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.122 serializeSequence()**

```
FastCdr& serializeSequence (
    const _T * sequence_t,
    size_t numElements ) [inline]
```

This function template serializes a raw sequence.

## Parameters

<i>sequence_t</i>	Pointer to the sequence that will be serialized in the buffer.
<i>numElements</i>	The number of elements contained in the sequence.

## Returns

Reference to the [`eprosima::fastcdr::FastCdr`](#) object.

## Exceptions

<a href="#"><i>exception::NotEnoughMemoryException</i></a>	This exception is thrown when trying to serialize in a position that exceeds the internal memory size.
--	--

**5.6.3.123 setState()**

```
void setState (
    FastCdr::state & state )
```

This function sets a previous state of the CDR stream;.

## Parameters

<i>state</i>	Previous state that will be set again.

### 5.7.1 Detailed Description

This class is thrown as an exception when the buffer's internal memory reaches its size limit.

### 5.7.2 Constructor & Destructor Documentation

#### 5.7.2.1 NotEnoughMemoryException() [1/2]

```
Cdr_DllAPI NotEnoughMemoryException (  
    const char *const & message ) [noexcept]
```

Default constructor.

Parameters

<i>message</i>	A error message. This message pointer is copied.
----------------	--

#### 5.7.2.2 NotEnoughMemoryException() [2/2]

```
Cdr_DllAPI NotEnoughMemoryException (  
    const NotEnoughMemoryException & ex ) [noexcept]
```

Default copy constructor.

**Parameters**

<i>ex</i>	<a href="#">NotEnoughMemoryException</a> that will be copied.
-----------	---

**5.7.2.3 ~NotEnoughMemoryException()**

```
virtual Cdr_DllAPI ~NotEnoughMemoryException ( ) [virtual], [noexcept]
```

Default constructor.

**5.7.3 Member Function Documentation****5.7.3.1 operator=()**

```
Cdr_DllAPI NotEnoughMemoryException& operator= (
    const NotEnoughMemoryException & ex ) [noexcept]
```

Assignment operation.

**Parameters**

<i>ex</i>	<a href="#">NotEnoughMemoryException</a> that will be copied.
-----------	---

**5.7.3.2 raise()**

```
virtual Cdr_DllAPI void raise ( ) const [override], [virtual]
```

This function throws the object as exception.

Implements [Exception](#).

**5.7.4 Member Data Documentation**

#### 5.7.4.1 NOT\_ENOUGH\_MEMORY\_MESSAGE\_DEFAULT

```
const Cdr_DllAPI char* const NOT_ENOUGH_MEMORY_MESSAGE_DEFAULT [static]
```

Default message used in the library.

The documentation for this class was generated from the following file:

- include/fastcdr/exceptions/NotEnoughMemoryException.h

## 5.8 FastCdr::state Class Reference

This class stores the current state of a CDR serialization.

```
#include <FastCdr.h>
```

### Public Member Functions

- [state](#) (const [FastCdr](#) &fastcdr)  
*Default constructor.*
- [state](#) (const [state](#) &)  
*Copy constructor.*

### Friends

- class [FastCdr](#)

### 5.8.1 Detailed Description

This class stores the current state of a CDR serialization.

### 5.8.2 Constructor & Destructor Documentation

#### 5.8.2.1 state() [1/2]

```
state (  
    const FastCdr & fastcdr )
```

Default constructor.

### 5.8.2.2 state() [2/2]

```
state (
    const state & )
```

Copy constructor.

## 5.8.3 Friends And Related Function Documentation

### 5.8.3.1 FastCdr

```
friend class FastCdr [friend]
```

The documentation for this class was generated from the following file:

- include/fastcdr/FastCdr.h

## 5.9 Cdr::state Class Reference

This class stores the current state of a CDR serialization.

```
#include <Cdr.h>
```

### Public Member Functions

- [state](#) (const [Cdr](#) &cdr)  
*Default constructor.*
- [state](#) (const [state](#) &)  
*Copy constructor.*

### Friends

- class [Cdr](#)

### 5.9.1 Detailed Description

This class stores the current state of a CDR serialization.

### 5.9.2 Constructor & Destructor Documentation

### 5.9.2.1 state() [1/2]

```
state (
    const Cdr & cdr )
```

Default constructor.

### 5.9.2.2 state() [2/2]

```
state (
    const state & )
```

Copy constructor.

## 5.9.3 Friends And Related Function Documentation

### 5.9.3.1 Cdr

```
friend class Cdr [friend]
```

The documentation for this class was generated from the following file:

- include/fastcdr/Cdr.h
